INNOVATION IS GREAT

BRITAIN & NORTHERN IRELAND

Aurigo self-driving pod

Introduction

The UK is an innovation powerhouse with remarkable capabilities across the technology sector. In areas like Artificial Intelligence or 5G Communications, or applications like Connected and Autonomous Vehicles, HealthTech or FinTech, the UK is pushing the boundaries of technology.

Technology in the UK is going from strength to strength. The UK's strong talent pool, dynamic ecosystem with a reputation for quality and attractive business environment continue to draw international renown. The UK remains the premier destination in Europe for Venture Capital. In the first eight months of 2019 the UK attracted more deals than in the same period in 2018, raising \$9.2bn into UK tech companies across 631 deals. On a cumulative basis since 2013, the UK has attracted \$26bn in total Venture Capital. Germany ranks second with \$13.6bn and France third with \$11.3bn.

The government is partnering with industry to support this growth through the Industrial Strategy and the sector deals. For example, the UK's world-leading AI capabilities, already powering start-ups and international investors, are being boosted by almost

£1 billion of investment including £300m of private sector funding.

Technological advancements are also crucial in the development of the vehicles of the future.

The UK is well-placed to play an important role in this, with the government and industry having announced an automotive sector deal which secures long-term investment in areas such as autonomous vehicles and battery electric vehicles.

This directory provides a list of some of the UK companies that you can find at MWC 2020, which form part of this revolution.

Find out more at the GREAT Britain and Northern Ireland pavilion at stand 7B41 or visit www.great.gov.uk/international

INNOVATION IS GREAT

BRITAIN & NORTHERN IRELAND

TfL powered travel app

Millions of Londoners navigate the city using one of the 500+ travel apps which are powered by Transport for London's freely available open data. For revolutionary innovation, choose the UK.

About DIT

The Department for International Trade (DIT) helps businesses export, drives inward and outward investment, negotiates market access and trade deals, and champions free trade.

The range of expert services is tailored to the needs of individual businesses to maximise their international success. Companies are given advice and practical support, and staff can assist at all stages of the business planning cycle, from inception to completion.

DIT offers expertise and contacts through a network of international specialists throughout the UK, and in British Embassies and other diplomatic posts around the world.

MWC 2020

5

We are an international economic department, responsible for:

- supporting and encouraging UK businesses to drive sustainable international growth;
- ensuring the UK remains a leading destination for international investment and maintains its number one position for international investment stock in Europe;
- opening markets, building a trade framework with new and existing partners which is free and fair;
- using trade and investment to underpin the government's agenda for a Global Britain and its ambitions for prosperity, stability and security worldwide.

✓ Belfast is Europe's top destination for new software development projects.*

Belfast, Co. Antrim

Northern
Ireland

Northern Ireland. More for technology.

Northern Ireland's people are highly educated, highly skilled and innovative, with a driven mind-set that means we always go the extra mile.

Our infrastructure is second to none, with fast telecommunications links to North America and continental Europe.

It's no wonder that our companies' innovative products are known around the world and over 100 international tech leaders have already located here.

Learn more about what Northern Ireland can offer your business.

Northern Ireland. Altogether more.
Visit InvestNI.com/mwc20

*FDI Markets, 2018

Northern Ireland is showcasing the best of technological innovation at this year's Mobile World Congress

With one of the fastest growing tech clusters in the UK, Northern Ireland is the birthplace of pioneering web and mobile products. It also offers international investors global leading software talent in a product engineering culture at a competitive cost.

Northern Ireland enjoys a growing global reputation for technology development. It features clusters and expertise in mobile telecoms, network management, cyber security, financial software, sports tech, health IT, data analytics and artificial intelligence, IoT and payments technology. Not only is the region the top international investment location for US cyber security development projects, Belfast is the top global location for fintech development projects and also Europe's leading destination city for new software development projects, joint first with London.

The region is now home to an impressive cluster of international companies, world renowned university research and innovative start-ups delivering global tech solutions.

Among the 1,200 tech firms in the region, there are over 100 international investors including Rapid7, SAP, Citi, Fujitsu, TSYS (Cayan), Bazaarvoice, Allstate and Visa.

The region's global success can be attributed to a blend of world class talent, excellent infrastructure, leading computer science expertise, tech research excellence, a highly competitive cost base and a supportive business environment, including attractive R&D incentives.

A particular attraction for tech companies has been the availability of high calibre skillsets being nurtured at the region's two world class universities Queen's University Belfast and Ulster University, which has the largest ICT course provision in Ireland and one of the largest in the UK.

Queen's University's Centre for Wireless Innovation (CWI) is represented on the Northern Ireland stand. A global leader in physical layer wireless communications, CWI is the UK's largest research, development and exploitation base in physical layer wireless, and one of the strongest in Europe.

Find out more about what's happening in Northern Ireland and check out the exhibiting companies that are bringing their exciting products and services to the show. Visit Dawson Andrews, Centre for Wireless Innovation, Neueda, EOS IT Solutions, Kainos, Raylo Group, SLA Digital and Pi Communications at stand 7B41.

Mobile World Congress 2020

Digitalisation and technological advances across the globe are increasingly changing our lives beyond recognition; they have revolutionised the way we work and travel, the way we learn about things, and the way we connect to the world.

As a leading digital economy, the UK is famed for being at the forefront of industry and technology. And behind this success is a large and thriving ecosystem of innovators and businesses, small and large, that drive technological advancements and real-life applications.

In this digitally connected world, the UK has undergone a truly remarkable transformation with the rise of new technology and today it stands as one of the most connected and most secure economies globally.

Supporting these businesses in their growth journey is a core mission shared by techUK. As the industry body representing the UK's thriving tech sector, techUK represents the companies and technologies that are defining today the world we will live in tomorrow. With over 850 members, of all shapes and sizes - from leading FTSE 100 companies to new innovative start-ups - it is our job to be the voice of tech.

As the sector has grown and developed, we have changed to reflect the breadth and potential of tech in the UK, reflecting the faster pace of change that continues to disrupt and drive the sector and supporting a more diverse base of innovative and fast-growing tech

companies operating across the economy and across the UK. From 5G to future mobility, from cloud computing to data analytics, and from artificial intelligence to smart city technologies and the Internet of Things (IoT), we work with businesses and government to make the UK a hotbed for innovation and the best place to start and scale-up technology companies.

While London is a global hub for technology, at the heart of tech in the UK is an ecosystem of thousands of companies producing digital technologies, products and services. From east to west, north to south, from enterprise class organisations to established medium-sized businesses, growing small businesses and an exciting generation of tech start-ups: the UK is a hotbed of tech talent and techUK exists to represent the sector in its entirety. Now more than ever UK-based innovators are excited to be engaging with potential partners on the world stage to grow and scale their businesses.

I encourage you to visit the UK companies as part of your visit to MWC 2020 and invite you to visit www.techuk.org to find out about our work and how we can help connect you to a vibrant UK tech landscape.

Simon Spier

Head of International Trade, techUK

tech^{UK}

techUK represents the companies and technologies that are defining today the world that we will live in tomorrow.

Around 850 companies are members of techUK. Collectively they employ approximately 700,000 people, about half of all tech sector jobs in the UK.

These companies range from leading FTSE 100 companies to new innovative start-ups. The majority of our members are small and medium-sized businesses.

@3finery

Company bio:

3finery provides the coolest line of magical objects on the market. They are so great that, in addition to being fun, they can talk, interact and send or receive messages to friends and family as if they were magically coming alive. Our company introduces a novel method of communication that brings toys to life in Mixed Reality. Using the camera video of the device, we provide a technical solution to use real-world objects as a communication channel and an entertainment tool. Numerous industrial and commercial applications can be leveraged using our technology.

Specialisms:

3finery offers a novel Mixed Reality technology that is capable of enhancing real world objects through a mobile device as if they were magically coming to life.

Robert.barnes@accelercomm.com
www.accelercomm.com
@AccerlerComm

Company bio:

AccelerComm, an exciting IP company that provides Forward Error Correction (FEC) channel coding solutions to accelerate the next generations of wireless communications. Our technology solves the challenges that would otherwise limit the speed of next generation wireless communication, namely the error correction decoding that is required to overcome the effects of noise, interference and poor signal strength. AccelerComm has patented encode and decode IP for 5G NR Polar chain, 5G NR LDPC chain and LTE A Pro Turbo channel coding, offering ultra low latency and delivering the 16x latency improvement to support numerology 4 in advanced 5G NR uRLLC applications.

Specialisms:

AccelerComm specialises in optimised channel coding (also known as forward error correction) solutions for 5G NR providing up to 16x improvement in latency and throughput. We achieve this by supplying best in class FPGA, ASIC and software only solutions.

Operating Countries:

Through years of university research AccelerComms unique technology achieves unprecedented performance whilst laying down the technology foundation for future wireless applications and services. Our technology is operational in several markets including; Mobile Handset, MobileBase station, Satellite and defense.

Company bio:

Amphenol Antenna Solutions (AAS) is a division of Amphenol-Corporation, a \$8 billion NYSE company supplying to diverse high-tech markets. AAS has the singular focus of designing and manufacturing high-performance base-station antennas, its pedigree and expertise derive from the integration of world-renowned companies: Jaybeam, Antel, CSA-Wireless and MAT-Equipement. AAS specializes in BTS, Small-Cell antennas and offers a complete line of site solutions. Moreover, AAS has developed and field tested a flexible and adaptable range of active antennas according to customer needs. These antennas open the doors to a new era of strategic partnerships to the challenges of combined 4G and 5G.

Specialisms:

AAS provide a comprehensive suite of solutions, with product available from the base station to the top of the tower. A pioneer in many areas, we innovate at our customers side with wide proximity and large flexibility to build the solution of tomorrow.

Operating Countries:

Amphenol Antenna Solutions operate all around the globe from 8 manufacturing locations. With over 50 product lines in place, the company ensures product for virtually all global applications and networks.

ANGOKA

+44 (0)7768 686 638
s.razak@angoka.io
www.angoka.io

Company bio:

Angoka Limited is a cyber security startup, headquartered in Belfast, with an office in London, and planned offices in Munich and Tokyo. Angoka provides embedded hardware solutions for managing the cyber security risks inherent in machine-to-machine (M2M) communication networks, such as those used for Connected and Autonomous Vehicles, Industry 4.0, Smart Cities and Homes, and Critical Infrastructure, including National Grids and Bank Networks. With a relentless approach to achieving technical excellence, Angoka is passionately committed to keeping the Internet of Everything secure.

Specialisms:

Angoka offers a decentralised authentication and secure communication protocol, applicable to vehicles and portable to IoT communications, Smart Cities and Industry 4.0. The protocol allows devices to receive and process information securely and efficiently over various communication channels.

Operating Countries:

United Kingdom

AttoCore

Stand: 7A11.11

Contact:

22 Priory Street
Cambridge
CB4 3QH United Kingdom

+44 (0)7824 692 723

steve.coppins@attocore.com

www.attocore.com

Company bio:

AttoCore develops AttoEPC, compact, flexible, 3GPP standards compliant virtual core software for 4G and 5G networks. Embedded in an eNodeB, AttoEPC operates alongside value added applications such as Push To Talk and AttoCore's patented Meshing capability and Location Based Services for deployment in military and public safety networks. Deployed at the network edge, with support for data offload (SIPTO, LIPA) or in the Cloud, AttoEPC is ideally suited to rural FWA and enterprise private LTE deployment including CBRS OnGo. AttoEPC's IOT support makes it suitable for many vertical segments including utilities, mining, oil and gas, healthcare, transport, manufacturing and hospitality.

Specialisms:

AttoCore 4G and 5G core software is 3GPP standards compliant, scalable, flexible and cost effective. It can be deployed in enterprise, industrial, government and rural scenarios which are not addressable by the core network products of legacy mobile telecommunications vendors.

Operating Countries:

AttoCore has existing operations in the UK, Europe and the USA and is seeking to expand both in these markets and, with new product vendors and systems integrator partners, to address enterprise, industrial, government and rural opportunities around the world.

d.owen@audiotelligence.com

www.audiotelligence.com

@AudioTtech

Company bio:

AudioTelligence technology makes speech intelligible in a noisy world. Our revolutionary audio source separation enables clear voice communication at distance for voice controlled consumer devices, even in real life noisy environments. Our software IP has been developed over 30 years by industry experts - it uses minimal resources, and delivers high quality results with very low latency and no artefacts. This means it also gives excellent results for real-time applications such as video conferencing and VoIP calls. AudioTelligence software is available to license on industry standard ARM and Intel platforms, offering a solution that is both low-cost and high-quality.

Specialisms:

Audio source separation. AudioTelligence uses a data-driven approach called blind audio signal separation, which does not require matched microphones or trained algorithms. It offers high performance with very low latency.

www.buyapowa.com
@buyapowa

Company bio:

Buyapowa is the leading global Refer-a-Friend ('Member-get-Member') platform for telecoms and powers referral marketing for Vodafone, BT, EE, Sprint, Voxi, Smarty, Rogers, Telus, Wind Hellas as well as HSBC's First Direct, Allianz, Travelex, Expedia, Carrefour, Cdiscount etc. First, our platform enables insurers to identify brand advocates among their customers. It then empowers and incentivises these advocates to refer the brand to their friends and incentivises them to share again and again. Our clients typically drive substantial incremental acquisition of new customers, with higher lifetime value, and at CPAs up to 80% lower than other channels.

Specialisms:

As the only scalable refer-a-friend and advocacy platform designed for regulated industries like telecoms, we deliver compliant, secure and flexible solutions that are deployed by leading Operators (fixed and mobile) and MVNOs across the globe

Operating Countries:

We have offices in London, Vancouver and Berlin and clients across all of Europe, Middle East, Africa, Asia, North and South America

Company bio:

CCS is the creator of Metnet - the world's first self-organising mmWave mesh for Gigabit backhaul and access applications. From dense urban cities to rural communities, Metnet can be deployed for 4G LTE and 5G small cell backhaul, Enterprise and Residential Fixed Wireless Access (FWA), Smart City, Wi-Fi and CCTV backhaul. Metnet is powering networks to mmWave 5G performance - intuitively, scalably, flexibly and cost-effectively. Delivering high capacity, ultra-low latency and ultra-fast deployment, Metnet is optimised for performance edge and multigigabit capacity. Following the success of Metnet 1200, CCS's Metnet 60G is now addressing the significant opportunity offered by unlicensed 60GHz spectrum.

Specialisms:

Metnet self-organising mmWave backhaul and access for applications including 4G LTE and 5G small cell backhaul, Enterprise and Residential Fixed Wireless Access (FWA), Smart City, Wi-Fi and CCTV backhaul.

Operating Countries:

We operate out of our Cambridge UK and San Francisco, US offices. We sell worldwide, directly and through our partner ADTRAN.

Company bio:

Changeway(R) - Changing the way organisations innovate, change and improve. Reinvented on a single digital platform, Changeway links your business strategy, goal deployment, improvement workshops and actual performance. It's applicable to any business where teams collaborate.

Benefits:

- Implement your strategy, deploy goals to focus improvement effort, measure outcomes. Get improved results.
- Digital workshops capture change data for future reference across the enterprise to share and promote more easily.
- Analytics enable better decisions and simplify learning. Because you learn faster you improve faster.
- Remote users with real-time synchronisation collaborate more and travel less.

Changeway - Improve faster. Learn faster. Grow faster.

Specialisms:

We are unique because we offer digital collaboration, brainstorming and meeting facilitation in an application built to enable business change. We differ because our integrated solution solves the problems of delivering high value change, not just a better meeting experience.

Operating Countries:

We are based in Glasgow, Scotland and in Vevey, Switzerland. We operate in North America, DACH, UKI and the Nordics.

A culture of innovation

The UK is at the forefront of a revolution. The UK's culture of innovation translates into world leading capabilities across a multitude of technology sub-sectors, from AI and IoT to Communications, Electronics and FinTech.

It's an industry that's creating thousands of new and highly-skilled roles, and simultaneously transforming the workplaces, capabilities and practices of more traditional sectors.

This culture of innovation and entrepreneurial ambition continues to propel the sector to exciting new heights. The UK is experiencing six years of continuous growth (and no signs of stopping) and new tech jobs being created 2.6 times faster than the rest of the economy. Wherever you look, it's evident the UK tech sector is really coming of age.

The number of digital tech companies born in the UK increased by an average of 20% each year between 2010 and 2015.

\$50.4bn

Digital services exports from the UK in 2016 were worth £39.1 billion, an increase of 21.8% from 2015.

1.87m

Digital tech jobs in the UK.*

@neutralwireless

Company bio:

Neutral Wireless has extensive experience in the planning, design and deployment of shared spectrum mobile/fixed wireless access systems, particularly for rural locations. The company's engineers and managers have many years background in design and building of private networks in the UK and internationally from 2G, through 3G and 4G, and now with 5G deployments. Recent projects include demonstrating neutral host implementations, shared spectrum and NB-IoT networks. Most recently with key partners we have designed and deployed private LTE/5G solutions for networks in the UHF band (TV-White-space), and in the 5G bands at 700MHz and 3.5GHz

Specialisms:

Working with key partners, Neutral Wireless specialises in end to end 5G 'new thinking' deployments for rural locations. Basestation deployments are based on AW2S software-defined-radio (SDR) remote radio head (RRH) solutions using the Amarisoft 4G/5G software stack.

Operating Countries:

United Kingdom, Ireland, other EU, planning New Zealand via partnership. We have projects in the UK, and in Ireland for deployment of NB-IoT. New Zealand will be a shared spectrum joint project strategic effort.

@OlvinGlobal

Company bio:

Olvin is an artificial intelligence company that is transforming the retail and consumer goods industries with predictive insights. Using the latest advances in machine learning, Olvin analyses billions of data points each day to make sense of consumer behaviour. This analysis helps us understand their needs, interpret their intentions, and discover what drives their decisions. We distill this intelligence into simple, actionable insights through our self-service web platform, Almanac. Using geospatial data as our cornerstone, we analyse trends emerging in the real-world and output predictive data to help brick-and-mortar businesses become as proactive as their online counterparts.

Specialisms:

Olvin's focus on simplicity takes the guesswork out of data analysis. We carefully curate and harmonise data before inputting it into Almanac's artificial intelligence engine. This produces clear insights which, through our turnkey web platform, businesses can instantly engage with.

Operating Countries:

Almanac is currently available to businesses across the USA. This year we'll be rolling out our service in key markets in Western Europe, including the UK where we are based.

Omnis Software are the creators of Omnis Studio, a world-class application development tool for creating attractive web, mobile and desktop applications for enterprises and SMEs. Omnis Studio significantly reduces the time/cost of application development. It is a true Cross-Platform application development tool enabling developers to write code once and deploy on any platform and device. Omnis Studio has helped thousands of application developers create market-leading applications for over 40 years. Omnis has a very active global developer community and is headquartered in the UK with subsidiaries in the USA, France, Germany and distributors for many other parts of the world.

Specialisms:

Omnis has been developing software tools for developers for over 40 years, the IDE is very feature rich, so developers only need one tool. VARs, businesses and government departments have been able to rely on Omnis for decades.

Operating Countries:

Omnis Studio is sold in over 50 countries across every vertical market. Our customers range from global enterprises to small businesses requiring bespoke business applications to VARs providing market specific business applications.

Mobile World Congress 2020

While the UK technology industry has a global outlook, it's also true many tech companies are thriving due to the strength and advantages of their own local clusters.

These create different kinds of partnership, but ones where idea-sharing, concentration of skills and research, and minimal travel time are helping these dynamic 'ground-up' enterprises to thrive and grow.

From seaside towns to major industrial cities, areas of tech excellence have developed all across the UK, often down to local factors such as the presence of an academic institution or historical strengths in particular economy sectors.

*Media City in Salford Quays
Manchester, England*

On a cumulative basis since 2013, the UK has attracted

\$26bn

in total Venture Capital

In the first eight months of 2019 the UK attracted more deals than in the same period in 2018, raising

\$9.2bn

into UK tech companies across 631 deals

In the past year, the UK has produced 5 new billion-dollar companies with a cumulative value of

\$10.3bn

The UK alone has 27/84 billion-dollar companies with a cumulative value of

\$80bn

Pod Group is a specialist in connectivity solutions tailored to IoT applications, with 20+ years of experience, research and innovation in mobile connectivity. Pod Group provides enterprises, manufacturers and systems integrators with a complete suite of IoT connectivity technologies to enable them to launch and scale their IoT deployments. Pod Group has offices around the globe, access to 600+ networks in 185 countries and offers expert consultancy and support in multiple languages. Pod's modular platform, Pod IoT Suite, provides centralized connectivity management of global multi-network, multi-IMSI, eUICC and LPWAN solutions combined with IoT security, and a hierarchical billing engine.

Specialisms:

We prioritize human connection, working alongside customers to understand their goals, adapting our platforms and services to suit them. Have a problem, question, need advice? We don't outsource any support - you'll be speaking to one of us.

Operating Countries:

Need international roaming, data in the USA, an IoT application in Africa, an Asian IoT SIM card? Pod has agreements with 600+ networks worldwide in 185 countries and counting. Your device will retain a robust signal even across borders.

+44 (0)1315 161 816
hello@pureLiFi.com
www.pureLiFi.com
@pureLiFi

Company bio:

Imagine every light could connect you to the internet. pureLiFi leads innovation in LiFi: High-speed, networked, wireless, bidirectional & mobile communication using light, whether visible or invisible.

Established in 2012, pureLiFi is a spin-out from the University of Edinburgh, where pioneering research into light communication began in 2008 under Professor Harald Haas, often called the “father of LiFi”. Building on that research, Prof Hass and Dr Mostafa Afgahni founded pureLiFi to take LiFi out of the lab and into real world.

Specialisms:

pureLiFi is the global leader in LiFi technology. We are bringing to market the world’s first commercial light antennas—the optoelectronic components which make LiFi possible, for all kinds of devices, from industrial to consumer and airplanes to smartphones.

Operating Countries:

pureLiFi operates globally with deployments in more than 23 countries. The company is headquartered in Edinburgh and has business units in the United States and Asia.

Company bio:

The Centre for Wireless Innovation (Queen's University Belfast) is the UK's largest research, development and exploitation base in physical layer wireless. It ranked 28th in the 2019 Shanghai Ranking's Global Ranking of Academic Subjects (5th in Europe) for Telecoms Engineering. 60 academics, engineers, postdocs and PhD students develop truly disruptive, end-to-end physical layer wireless technologies and techniques to enable the creation of a data-driven, hyper-connected society. Working primarily in the RF through to sub-millimetre wave bands, they create transformative technologies for coverage, data rate, latency, security, connectivity on a massive scale or wireless imaging and sensing, in 5G wireless networks.

Specialisms:

Current research focuses on Wireless Power Transfer, Physical Layer Secure Wireless, EM Sensing, Cell-Free Massive MIMO (6G networks), Nano-Antennas for Wearable and Implantable Medical Devices, flat antennas for Connected & Autonomous Vehicles, Beamformers for mm-Wave (28 GHz, 39 GHz).

Operating Countries:

Our IP is licensed or evaluated in Northern Europe, North America, and some countries in Asia.

@scot5gcentre

Company bio:

The Scotland 5G Centre has been set up to accelerate the adoption of 5G and realise its economic and societal potential for Scotland. The S5GC has received investment from the Scottish Government and is an innovative partnership between the University of Strathclyde (which hosts us), the University of Glasgow and the Scottish Futures Trust.

Specialisms:

Harnessing the enabling qualities of 5G technology, the Centre is concentrating on a number of key sectors including healthcare, transport, education, public services, agriculture and aquaculture, tourism, gaming, and energy.

Operating Countries:

Located in the Scotland's Glasgow City Innovation District, we are collaborating with businesses, researchers and the public sector across Scotland and beyond to realise the benefits of 5G.

@TMTAnalysis

Company bio:

TMT Analysis is a specialist mobile numbering intelligence company. Our suite of products provide customers with the fastest and most comprehensive network and numbering data on the market today, used by businesses globally to improve customer interactions, gain useful insight and authenticate users, while reducing costs and improving the quality of their service. With the increasing need for Application to Person (A2P) messaging, two stage authentication and identity management, our data is used millions of times daily to deliver important information quickly and accurately. If you pay per query for mobile routing intelligence, our services will significantly reduce your costs.

Specialisms:

Our superfast query platform identifies the network of mobile customers within 5ms, ensuring the accurate routing of A2P SMS messages. In addition, our Active Number Intelligence service can cleanse mobile numbers held on databases for compliance or effective marketing.

Operating Countries:

TMT Analysis offers a truly global service, offering mobile numbering intelligence in every region of the world.

 @Truphone

Company bio:

Truphone has been championing digital mobility and customer choice for over a decade. Everything we do is to engineer smarter, more seamless connections between things, people and businesses around the globe. And that's why we keep inventing. We created a truly global mobile and data network. We built our own software to fully digitise cellular connectivity—at a speed and specificity that is blowing past the rest of the industry. That technology is now changing the way the whole industry works—from mobile operators to device makers and chip manufacturers.

Specialisms:

Together with our global network, Truphone has built software to improve connections across the supply chain. As a connected technology innovator, we support operators, device makers and chip manufacturers with our GSMA-certified SIM technology.

Operating Countries:

Headquartered in London, Truphone has 15 offices across four continents and continues to expand globally. Our network guarantees secure connections in over 100 countries worldwide and our customers rely on us in Europe, the United States and Australasia.

@ZeettaNetworks

Company bio:

Zeetta Networks is a network automation company that delivers digital transformation with intelligence and automation. Zeetta Networks developed NetOS®, it's network control and management platform for enterprises and managed service providers (MSPs) in 2016 and the enterprise version, NetOS Enterprise™, was deployed in Bristol's Ashton Gate Stadium in 2018. Last year Zeetta Networks launched its temporary or deployable network solution, NetOS Rapide™. Zeetta Networks was actively involved in the UK Government's DCMS Trials and Testbeds programme where it delivered 5G network slicing. In 2019 Zeetta Networks was recognised as a "Gartner Cool Vendor" for Communications Service Provider Network Operations.

Specialisms:

Zeetta Networks is an intelligent network automation company with a unique service-centric approach to intent-based networking using Service Orchestration, Analytics and Automation to provide network visualisation, control and management for enterprises and managed service providers. This drives 20-30% operational savings.

Operating Countries:

Zeetta Networks is currently active in the UK with some business in Germany, France and Italy. In 2020 the company expects to expand its geographical coverage across Europe and potentially in North America by year-end.

@Zumopay

Company bio:

Zumo is normalising cryptocurrency. Our mobile app allows users to hold, send and receive cryptocurrency in a simple and secure way. Our ZumoPay payment gateway allows organisations to cater for the cryptocurrency generation. Our exchange means the company receives the payment in € or £ whilst the user pays in crypto. Our ZumoKit solution allows organisations to embed secure, white labeled cryptocurrency wallet infrastructure into their solutions with a few lines of code. There are over 60m people holding cryptocurrency - our aim is to help them make more of it on a daily basis.

Specialisms:

The combination of the ZumoApp, ZumoPay and ZumoKit means that Zumo can really start to enable mass adoption and regular use of cryptocurrencies. Our dedicated and experienced legal team are following all regulatory and compliance requirements and recommendations.

Operating Countries:

We are global for crypto to crypto transactions and currently bound to £ and € for the exchange. More currencies to come in the near future.

Global Entrepreneur Programme

Global Entrepreneur Programme (GEP) is the UK government's flagship programme that empowers internationally mobile entrepreneurs and enables them to internationalise from a UK global HQ.

GEP leverages the UK's world-class ecosystem to provide global entrepreneurs with access to capital, talent, markets, and guidance.

Over

£1bn

Equity
investment
raised by GEP
companies

1000

Mobile
entrepreneurs
relocated to the
UK since 2004

1000

High value jobs
created by GEP
companies

350

Companies set
up their global
HQs in the UK in
the last 4 years

- The GEP utilises the networks and insight of a team of successful entrepreneurs known as 'dealmakers'
- The dealmakers leverage their expertise and networks to support entrepreneurial talent with the potential for rapid growth.
- Dealmakers are entrepreneurs and business people in their own right, who have extensive experience founding, building and exiting technology companies

Department for
Digital, Culture,
Media & Sport

5G Testbeds and Trials Programme

The UK is committed to providing the world-class digital infrastructure it needs to compete and grow in the modern economy.

The 5G Testbeds and Trials Programme was set up as a centre of excellence in 2017 with £200m committed to running projects across the UK to deploy new wireless infrastructure and test 5G technology.

UK5G

UK5G is the national innovation network dedicated to the promotion of research, collaboration and the industrial application of 5G in the UK.

Its mission is to ensure that the UK is at the forefront of global 5G development.

- **2412 registered members and 1097 organisations**
- **There are well over 300 5G articles on the site and 200 5G resources**

www.uk5g.org

5G RuralFirst

The 5G RuralFirst testbed as part of the UK's 5G Testbeds and Trials Programme delivered trials to exploit 5G benefits for rural communities and industries like agriculture to address challenges and build business cases for 5G rural deployment. Pictured is the Aquaculture Health Monitoring use case.

Salmon exports are a vital contributor to both Orkney and the UK's economy. Keeping the salmon healthy is paramount. Sensors deployed at farms around the archipelago allow staff to measure pH, oxygen, salinity, and temperature levels from remote locations - and keep a close eye on the wellbeing of their stock around the clock.

@adtonoscom

Company bio:

AdTech company, the creator of AdTonos - all-in-one solution for programmatic and an end-to-end platform for advertisers and a SaaS solution for broadcasters. AdTonos' market breakthrough is the innovative mechanism of real-time ad break replacement. The company also created innovative technology for broadcasting interactive radio ads via smart speakers, which means people can now interact with ads while they're listening to the radio. The platform offers advertisers a massive reach in the most dynamic audio markets, including smart speakers, music streaming, podcasting, and online radio, providing them with next-generation tracking and performance analysis tools for all audio marketing activities.

Specialisms:

AdTonos offers an excellent opportunity to deliver highly-engaging advertising experiences, enables deep personalization of audio campaigns based on real-time data (weather, location, time, device type, interests, shopping intent, brand exposure, or custom segments), listening history (remarketing) and measures the conversion.

Operating Countries:

AdTonos operates from London but enables the advertisers to launch a campaign directly and reach the global audio inventory through Triton and integrated DSP platforms: The TradeDesk, MediaMath, AppNexus, Adform, RTBiq, DynAdmic, Acuity, Xaxis, and Google D&V 360.

@whitelabelloyal

Company bio:

White Label Loyalty offer unique digital loyalty solutions to businesses wanting to create their very own branded digital loyalty app & integrated solution. Providing not only tailored digital loyalty, but also a powerful engagement & retention engine that has been tested and proven to increase customer retention by 15% or more. We have created a cloud-based loyalty platform that empowers businesses to increase their revenue by understanding, engaging and retaining their customers. Our flexible API and SDK based approach makes it easy to seamlessly integrate loyalty into your existing systems and applications.

Specialisms:

We have a unique approach to customer loyalty which uses the power of big data, artificial intelligence and machine learning to predict customer behaviour and pro-actively engage with customers.

Operating Countries:

Our clients are based all over the world. Our largest clients operate within the UK, EMEA and APAC markets.

51Degrees

51Degrees takes digital marketing beyond responsive web design for OpenText

OpenText knows that when it comes to web conversion, Responsive Web Design (RWD) is not a complete solution. Device detection is needed for granular analytics, previewing and targeted optimization. OpenText chose 51Degrees to ensure their TeamSite digital marketing solution exceeded sophisticated customer demands. Device detection is a crucial component of any modern technology platform, and can be used to:

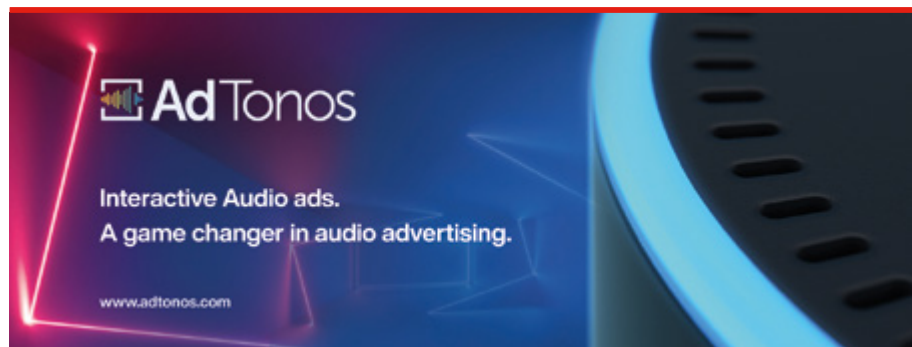

- Optimise UX through improved data entry interfaces, improving drop out and conversion rates;
- Improve page load time by optimizing web pages within the WCM platform, improving UX and SEO rankings.

- Enhance analytics beyond the basics by adding dimensions such as physical screen size, device age, price, and supported features.
- Enable granular web design through understanding user interactions.

Replacing a technology vendor is a daunting task for any business. 51Degrees made the process easy for OpenText. Their TeamSite platform is now well positioned to achieve customer benefits beyond conversion rate optimization.

Guy Hellier, Vice President, Product Management Engineering says *"Queries were responded to in a very timely manner, often with extra suggestions or other useful information."*

AdTonos

Meet Yours Truly, first-ever radio interactive ads.

The AdTonos platform has developed its own leading-edge technology based on AI that allows serving interactive radio ads on smart speakers. For the first time in history, the listener can interact with a radio ad. Dialogue advertising interactions prompt the customer to perform various actions related to the advertised product, like: book a test drive, buy tickets, book a vacation, add the selected product to an online shopping cart. What can interactive ads can look like on the Alexa smart speaker? "The BMW 5 series now with the sheer advantage. Experience it at your preferred authorised dealer today." Alexa: "To book a test drive at the nearest BMW dealer, say: Alexa! Book test drive, and your preferred time of day." Listener: "Alexa! Book

test drive, Wednesday afternoon" Alexa: "There are slots available at 3:40 and 5:40 pm." Listeners: "I prefer 5:40 pm" Alexa: OK. I'm sending you a confirmation email."

Michal Marcinik, Founder and CEO of AdTonos, says *"Our solution will be a real game-changer in audio marketing. Now advertisers can run audio CPA campaigns through renowned radio network brands. Our goal was to make the voice-ad interaction as natural as it can be, and we've achieved it."*

AttoCore

AttoCore LTE Enhanced Packet Core Software And UK Emergency Services

Excelerate is the global market leader in the end to end supply and integration of resilient communications solutions, designed by Excelerate to perform in the most challenging environments, where fast deployment is essential. Excelerate's requirement was for a means of providing guaranteed LTE coverage at emergency sites, without relying upon the radio access networks of the commercial mobile operators. With access to LTE capable spectrum, Excelerate designed a portable field deployable solution, which could be deployed within a vehicle, transported to and operated at the site of an emergency, either within the vehicle itself, or carried and used outside the vehicle by an emergency responder.

The solution was created by combining the small cell expertise of cellXica with an AttoEPC Enhanced Packet Core solution from AttoCore. Compact, flexible, scalable and cost effective, AttoCore's AttoEPC is the ideal solution for field deployable network requirements.

David Neil, AttoCore Chief Technology Officer, commented: *"Reliable communications are essential to the delivery of emergency services. We are delighted to provide Excelerate Technology with a flexible and agile LTE communications solution as a component of a mission critical communications solution for Emergency Services, incorporating AttoEPC LTE core software."*

AudioTelligence

Far Field Voice Control for Smart TVs in Noisy Environments

We recently completed the implementation of our software IP running on ARM to provide far field voice support to control smart TVs in noisy environments. The implementation includes our leading Acoustic Echo Cancellation which eliminates the sounds coming from the TV to enable 'barge-in' even at the loudest volumes, and our class-leading Blind Source Separation extracts the source of interest from other background sounds to deliver reliable command and speech recognition.

Our technology delivers significant improvement over other solutions for a host of other speech-driven consumer products such as smart speakers and sound-bars.

Ken Roberts, CEO said: *"Our client's voice controlled TV worked well in a quiet room. But in noisy real life situations it had difficulty interpreting instructions. Our technology solved that problem."*

Avanti Communications

Extending EE's 4G network

To keep up with the ever increasing demand, EE required a "carrier grade" Cellular Backhaul service, capable of meeting stringent security controls and extensive reach of the UK, whilst maintaining Quality of Service. The network needed to provide full coverage, even in rural areas, support rapid deployment and be highly resilient and reliable.

EE partnered with Avanti Communications to provide Satellite Backhaul and backhaul backup to over 1,000 fixed and mobile base stations across the UK. Avanti delivers bespoke Managed Services for Mobile Network Operators, such as EE, large enterprises and governments who require tailored satellite solutions.

Blackbelt Smartphone Defence

The reliable partners when it comes to up scaling your business

In 2018 Blackbelt were asked to participate in a RFP for a 3PL spread across the globe, in offering Blackbelt's proprietary Datawipe and Analyst mobile testing solutions. The Blackbelt team completed highly complex; multi document RFP, winning several rounds of evaluation, eventually being invited onsite to prove the solutions in a bake off against other well recognised competitors. The Blackbelt solution out performed the other contenders and they were requested to complete a second week of testing and training with operators. With the success on site A, the Blackbelt team were sent to the other side of the globe, to participate in another evaluation, again proving that they had the ability and agility to perform on a global

scale. Blackbelt eventually won the global RFP and are now the global preferred vendor. Since winning the RFP, Blackbelt's relationship with the vendor has strengthened and given them the ability to strategically employ people across the globe to service their global reach of clients.

Harby Garchay, Director, says *"We believe that our software and the people in our organisation have allowed us to become highly recognised within our industry. We have proven ourselves to be able to participate on a global scale, with high quality innovative software we have processed in excess of 10million devices in multiple territories"*

Bubbl

Bubbl - How to save mobile marketing from itself.

In 2017, after years of frustration at the state of the digital marketing landscape and the harvesting of millions of people's private data, Jo Eckersley formed Bubbl to create a tech solution that would eradicate the dubious practices that had become standard in the industry. Bubbl's aim was to enable app owners to improve their offering, by engaging their audiences with location/time sensitive content that was actually useful and/or entertaining - not just "buy this." Going through an 18 month R&D period, Bubbl tech materialised as a multifunctional, intuitive app plug-in that integrates seamlessly into Android and iOS apps. App owners have their own login to a personalised, branded dashboard which allows them to upload content,

create geofences, set campaign lengths and analyse campaign effectiveness. Marketers can send video, audio, image, surveys and push notifications to their audience, with deep links attached.

"Bubbl's tech is led by our desire to get away from data mining, invasions of privacy and mindless marketing. We empower companies to transform their apps with digital tools their users want to use more than once."

Jo Eckersley, CEO

CableFree: Wireless Excellence

CableFree high speed links for Vodafone

CableFree MIMO radios are used extensively by Vodafone Egypt for "Last Mile" connections to corporate customers providing 100Mbps dedicated "Leased Line Services" using wireless Point to Point links. Wireless is used in preference to Cable and Fibre Optic links which are slow to install, expensive and disruptive. The Wireless links are mission critical and carry all data services required to each corporate end user. Installed and maintained by the CableFree partner in Egypt for full "Turnkey" operation. Over 100 links deployed.

"We worked closely with the CableFree team to design & deliver a technically excellent wireless solution for Vodafone. The customer is delighted with the result, and expanding coverage"

General Manager, local integration Partner.

Cambium Networks

Eurona Ireland deployed PMP 450M to provide high speed connectivity

The PMP 450M AP with cnMedusa technology slotted perfectly into our existing network. Because we have evolved with Cambium equipment over the past 10 years, cnMedusa was the next natural step for us. Being able to use exiting PMP 450 subscriber modules meant a saving and ease of integration." Customers were immediately pleased with the results. As a result, Eurona IRL now offers new subscription packages on the PMP 450M ranging from 15 Mbps to 50 Mbps, and customers are taking the higher performance packages. "Many customers are using multiple applications at the same time such as Netflix, YouTube, Facebook, IPTV," said Wilson. Business and residential customers in Longford now have the latest wireless broadband technology.

People can now stream videos, upload and download data at high speed. This is great news for the people of Longford and surrounding counties and rural communities beyond the reach of fiber technology.

Barry Wilson, Country Manager, Eurona Ireland said *"Prior to installation of the PMP 450m, customers were limited to 8-10 Mbps packages. We can now with confidence provide up to 50 Mbps speeds to customers."*

Cambridge Broadband Networks

CBNL deploys Fixed Wireless Access for CenturyLink in South America

Cambridge Broadband Networks (CBNL) has signed an agreement with global technology provider, CenturyLink, to extend the reach of the network service provider's fibre-rich world-wide footprint and to make their robust portfolio of network services and managed solutions available to businesses across South America. CBNL is deploying a carrier-grade, 10.5GHz, Fixed Wireless Access (FWA) network to provide last-mile connectivity for CenturyLink's core network, serving hundreds of businesses in Peru, Argentina, Ecuador and Venezuela. CenturyLink has one of the world's most powerful networks with approximately 450,000 miles of fibre deployed globally and more than 150,000 fibre-enabled on-net buildings. The service provider

has previously used point-to-point (PTP) fixed wireless links to bring additional customer on-net. CBNL is replacing this PTP architecture, which is expensive to scale and maintain, with its powerful and cost-effective point-to-multipoint (PMP) FWA infrastructure using high-capacity millimetre wave (mmWave) spectrum.

Andrés Cáceres, Director of Network Engineering and Architecture, CenturyLink, said: *"CBNL's PMP architecture has allowed us to streamline the network and minimise its visual impact by freeing up space on saturated city towers. This boosts our efficiency, enabling us to reduce costs and overall power consumption."*

Cambridge Communication Systems

Wireless Access gigabit broadband in London's Soho

CCS's Metnet 60G 12Gbps unlicensed mmWave backhaul and access system is powering a flagship gigabit broadband service just launched in London's Soho - delivering speeds of up to 1Gbps. The Fixed Wireless Access solution - deployed by next-generation wireless Infrastructure-as-a-Service provider Ontix with CCS's mmWave 60G nodes providing ultra-high performance connectivity - is now live and delivering ultra-fast connectivity to a key urban hotspot in Soho's Berwick Street market.

Antony Tomlinson, Chief Executive, Ontix said *"We are incredibly excited to be rolling out gigabit broadband, connecting areas where fibre has been economically challenging, and ending the frustration of underserved customers. Our FWA solution offers an unmatched solution for quickly, easily and cost-effectively meeting pent-up consumer demand for lightning-fast, gigabit service."*

CENSIS

Internet of Things (IoT) for smart buildings

The management of large buildings and property estates could be on the verge of an IoT revolution, following the development of a new sensing technology by a Scottish technology start-up. CENSIS helped Beringar develop a non-intrusive sensor to significantly improve the understanding of how buildings are used, boosting office space productivity and driving resource efficiency. Transmitting data wirelessly using an IoT (LoRaWAN) network, the sensor replaces traditional methods of measuring the utilisation of buildings, such as clipboard surveys, by accurately counting the number of people in a room, checking building occupancy levels and identifying trends in the ways people use buildings.

It can also measure temperature, record air quality and monitor CO2 levels.

Stephen Milne, Business Development Manager said *“CENSIS helped Beringar build a prototype, deploy it in a building and prove the technology worked. The company now has a product on the market, customer deployment with clients including the NHS, and interest from around the world.”*

Citi Logik

Department for the Economy Northern Ireland uses Citi Logik

The 2016 vote to leave the EU posed numerous challenges for government. Perhaps one of the most complex was the impact of the border between Ireland and Northern Ireland. Residents between the two countries have been able to move freely across the border for work and leisure. As part of the preparations to leave the EU, the Department for the Economy in NI, was concerned with the impact leaving could have on border crossing, and wanted to see if certain groups or areas would be affected and impact the economy. Working with Citi Logik the Department was able to use anonymised mobile location data to establish travel movements and frequency. The data represented a large and robust data set upon which to

extrapolate estimates. There was also flexibility in the way the data could be analysed by Citi Logik, helping the team achieve a clear picture of what was happening.

Wendy Lecky, from the Department of Exiting the EU said *“The scale of the data Citi Logik had access to contributed to the quality of their analysis. It is now a widely accepted figure for within Northern Ireland and the rest of the UK.”*

Cobham Wireless

The Berlin U-Bahn

Cobham Wireless worked with operator Telefónica to deliver 4G coverage across Berlin's U-Bahn for subscribers of all three of Germany's major mobile operators. Cobham's idDAS (intelligent digital distributed antenna system) is now providing reliable, high-quality connectivity services for millions of passengers, following a project involving minimal disruption and reduces OPEX. The historic underground transport network presented a difficult environment in which to lay fibre cabling and house equipment. The legacy system supported one operator, with no option of expanding or configuring the architecture. The idDAS wireless coverage solution is now delivering the high data throughput and capacity required to support the hundreds

of millions of passengers who use the U-Bahn every year. The fully digital solution reduces the number of base stations required. Due to its infrastructure, idDAS requires minimal hardware and fibre, which minimised the cost of deployment.

Ingo Flömer, CTO, Sales, Marketing and Business Development, said *"We've developed idDAS to help solve the challenges many venue owners – or those overseeing transport projects – typically face: the need to support multiple operators on multiple frequencies, and to deliver connectivity to a high volume of connected devices"*

Coderus

Coderus Supporting Team UK in \$America Cup Challenges

Coderus, as a Cypress, Microchip, Qualcomm Design Partner has experience in providing high quality and high-performance solutions. Coderus' first involvement with America's Cup began in 2015 with joining Ben Ainslie's Land Rover BAR team in their challenge for the 35th America's Cup. Coderus pioneered a secure and reliable solution, to meet the standards of such a prestigious team. The Land Rover BAR team was the British challenger and was made up of some of the best British and international sailors, designers, builders and engineers. Coderus supported the team with a seventh virtual crew member by providing a mobile app solution. This solution provided the crew with critical, real-time information throughout the race with no user interaction.

The embedded sensors on the boat enabled critical data to be read in user-friendly and water-resistant Android tablets and wearables. Coderus story continues with re-joining the team with America's Cup 36th Challenge.

Sailing Team Tactician and Olympic Gold Medallist, Giles Scott said, *"We were desperate for an app that could act as a virtual seventh crew member and become central to our decision-making process during the race, providing Ben and I with the data that we really need to gain a competitive advantage."*

CommAgility

CommAgility LTE systems chosen by Lockheed Martin for satcom project

CommAgility was selected by Lockheed Martin to supply integrated software and hardware for an innovative satellite communications (satcom) project. CommAgility is supplying a customized version of its SmallCellPHY software, which is a complete LTE physical layer for small cells, compliant with 3GPP Release 10. The LTE software will run on CommAgility's AMC-D24A4-RFx processing/RF module, and the company is also supplying its AMC-4C6678-SRIO module for the project. CommAgility has deep LTE expertise coupled with a wide range of LTE software IP, and is the ideal provider for customers who wish to take the LTE standard in new and innovative application areas such as satellite communications or other specialized networks.

Joseph Baldasano, LM Fellow and Satcom Project Chief Engineer at Lockheed Martin said, *"CommAgility has been able to deliver a valuable combination of LTE expertise and support, together with excellent hardware and software products, that makes them a key component of our satcom project."*

Copper Horse

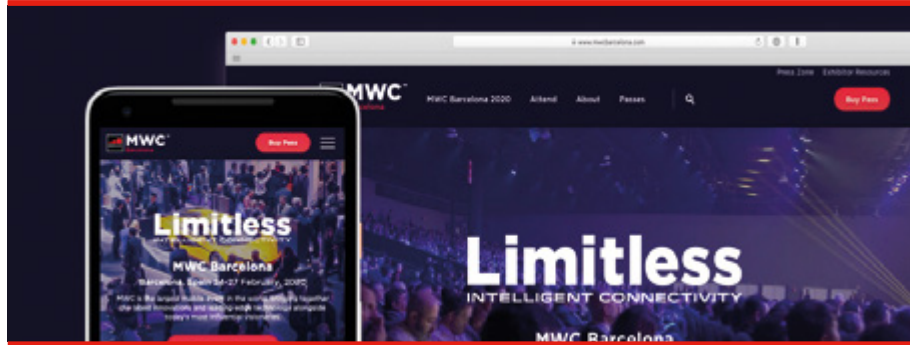

Protecting consumers from Direct Carrier Billing (DCB) abuse

Copper Horse was commissioned by the Phone-paid Services Authority (PSA), the UK's premium rate regulator, to investigate the problem of abuse in Direct Carrier Billing (DCB) services over the web. Many measures taken in the regulatory space can be punitive and with limited success. We carried out a thorough investigation and security testing of industry participants, ultimately providing a technical report and industry recommendations with short, medium and long-term actions which would be both pragmatic and successful. Our CREST accredited penetration testers worked together with payment intermediary companies and network operators to understand vulnerabilities and the modus operandi of malicious actors,

including looking at the usage of 'dark patterns' to manipulate and socially engineer users.

David Rogers, CEO, Copper Horse said, *"This is just one example of an end-to-end security project, tackling a very difficult problem but dealing with the root causes rather than the symptoms. The work has protected the mobile industry and consumers across the UK from abuse."*

Dawson Andrews

Dawson Andrews deliver MWC's Digital Experience

The event you are at today (Mobile World Congress Barcelona) is a key customer of Dawson Andrews. Headquartered in Belfast, Northern Ireland, Dawson Andrews is a software development and design company that is used for digital product innovation by companies like eBay, Danske Bank, Niice.co and the GAA as well as MWC themselves. The digital experience and in particular the website serving the content for and about this event are the digital entry points for delegates, speakers, exhibitors and sponsors to engage with MWC. The ambitious roadmap for the project is being realised before the eyes of the world. A content and design system scaling across MWC Barcelona, Los Angeles, and Shanghai is empowering marketing and

editorial teams and multiple API integrations, which includes providers such as Salesforce and Eventbase sharing live updates between web, iOS and Android. Available in 4 different languages the content will be accessed by 2 million users.

Sarah Hutcheson CMO/Director of Events Marketing, GSMA said, *"There is a will to succeed with Dawson Andrews that makes it feel inevitable, the success that they've had in the short space of time was a sign of things to come that we wanted to be a part of."*

Dexon Software

Automating the tax information process of a whole country

DIAN is the National Tax and Customs Office of Colombia. The information received by DIAN contains all the behavior and financial movements of all Colombians, both people and companies, residents of the country and abroad. With this information it is possible to determine whether these people are fulfilling their tax duties. The problem is that this information has a huge volume (hundreds of millions of records daily), it comes in a multitude of different formats which makes it very difficult to consolidate all the data around each taxpayer so that the entity can be effective in reducing evasion, avoidance and smuggling. DIAN receives information from more than 120 different sources, including data sent by other

entities or governments through exchange agreements, and those that are required to share all Colombian companies. Currently, the processing, validation and consolidation of all this information is done through automated flows in the Dexon software.

"Dexon has allowed export information to be shared with other entities, perform the processing to verify the quality of the information and apply validation rules on the data to integrate them into the entity's data models with quality and opportunity"

According to Public Records

Docuten

Signing of contracts “in situ” in over 80 countries

Through Docuten’s cloud solution in both native application and web application, this multinational fashion retail brand operating in over 80 countries are able to sign on employee contracts, certificate of origin, and sales contracts on the spot with the store’s iPad or Tablet. Automatically centralizing all of the documents in real-time on the cloud.

“With Docuten it was all very simple. The implementation was carried out by their team and a month and a half later it was working. In the end, it is to determine the people who have to lead the digital transformation project (of Docuten) and mark milestones.”

Víctor Reyero - Serviocio’s Financial and Human Resources Director.

EnSilica

Automotive H-Bridge Controller

Features:

1. H bridge controller with four 0.5A drivers
2. Design to be meet ISO26262 ASIL-D
3. SPI interface with error detection and correction
4. Two independent 13b Σ ADC's for current measurement
5. High dynamic range sense amplifier with 36V common mode range
6. OTP memory with CRC checking
7. Multiple independent voltage references and LDOs
8. Extensive monitoring and fault detection circuits

Process: 0.18um High Voltage BCD

DFT: Full control and observability for analog functions, full scan for digital logic, BIST for OTP and boundary scan for I/O's

Toolchain:

1. Cadence: Innovus, Liberate, Virtuoso, ADE, Spectre
2. Synopsys: Synopsys DC, Primetime, Formality
3. Mentor: Calibre, Tessent

Ian Lankshear, EnSilica Founder and CEO, said, *“Our customer’s product development cycles are streamlined by the world-class expertise in custom IC and system design, supply management and silicon IP that we provide”* Ian Lankshear, EnSilica Founder and CEO”

Eseye

How Intelligent Connectivity helped Costa deploy Global Smart Vending

Costa Express created IoT vending machines but they had concerns about connectivity. Poor uptime would hinder the potential for proactive maintenance and monitoring stock levels – damaging their brand and revenue.

Costa employed our consultancy to redesign their machines connectivity from the ground up. Our unique solution and powerful connectivity has allowed them to significantly increase vending machine uptime and accelerate the deployment of these machines to new markets, as they have one solution they can deploy globally.

Paul Borrett, Systems & Data Director said, *“Eseye’s fully redundant fault-tolerant network provides a managed connectivity service with a global footprint, whilst support for multiple cellular networks in each geographical region enables close to 100% connectivity uptime. This means we can deploy connected devices anywhere in the world.”*

F(x)tec

F(x)tec - smartphones that do more

In 2019 a London smartphone brand was launched that focus on functionality in devices. Their first device is the F(x)tec pro1, a slim elegant landscape keyboard smartphones which provides the best experiences of a physical and on screen keyboard. It is a phones that gives more functionality and a phone like no other. You can effortlessly manage productivity in your pocket and experience split screen apps horizontally using a physical keyboard.

“We wanted to create a smartphone which was more functional and productive than anything on the market today, the Pro1 allows you to effortlessly manage your productivity in a slim elegant device.”

FarrPoint

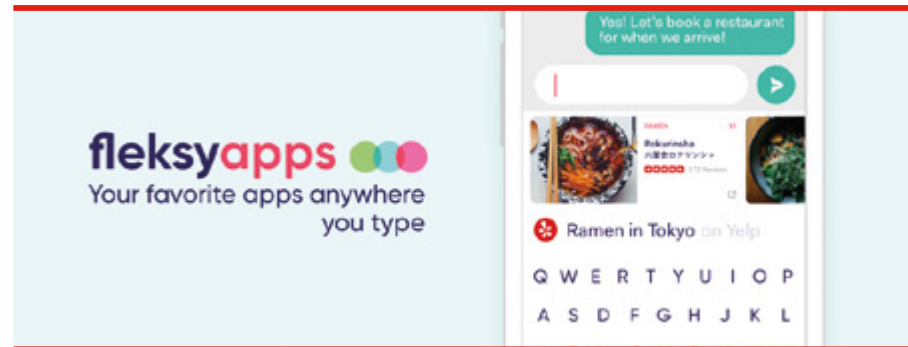

Rubbish mobile coverage tested by Council refuse vehicle

Mobile connectivity is rapidly becoming more and more of an essential service that needs to be available to us all. 4G mobile connectivity plays a key role in everyday life as we are dependent on access to the Internet for public services, business activities, shopping and entertainment. Increasingly, public bodies need to know the connectivity available to their constituents for the purposes of delivering public services and raising awareness of digital exclusion. At FarrPoint, we wanted to come up an efficient solution to solve this problem. Our Mobile Network Survey system continuously measures and logs the mobile signal quality for each operator simultaneously.

Our first deployment of this service used refuse collection vehicles, travelling around all the streets of both urban and rural areas. This service provides an independent view for our customers who need coverage assurance and verification, particularly for those organisations running mission-critical communications over mobile networks.

Andrew Muir, CEO said, *"We're excited about this service, there's nothing else like it on the market and are seeing great interest from public bodies to understand the actual mobile availability in their region from an independent source."*

Fleksy

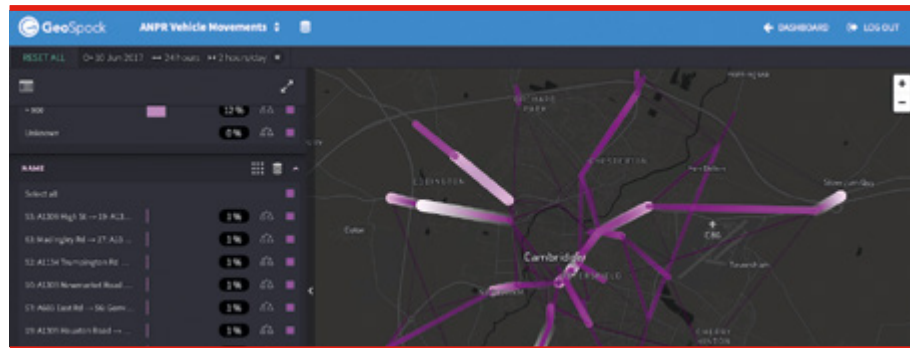

Fleksy keyboard preloaded on Palm's smallest device

To provide an accurate typing experience on a 3-inch screen, Fleksy created a completely unique and customized keyboard that would meet the needs of Palm's brand. We worked with Palm to develop the look and feel that matched their sleek, extra compact design while maintaining optimal functionality. Customization with a significant size constraint, Fleksy rearranged the keys layout, speech-to-text and developed its own input method to meet users' needs. Palm's Ultra-mobile companion device is designed for life on the go. A fully connected companion that is in-sync with your primary device, making mobile truly mobile again.

Olivier Plante, Co-Founder and CEO, Fleksy said, *"We are proving that a virtual keyboard made to type can be re-invented into a powerful tool for users, and a strong revenue generator for both OEMs and Brands."*

GeoSpock

Visualising Traffic Data as a Heatmap

Cambridge City Council had a wealth of anonymous data from automatic number plate recognition cameras in 96 locations in and around Cambridge. It was keen to discover what it could learn from the data to help with planning and developing the city's transport network. Visualising the traffic data as a heat map highlighted things like the busiest entry points into Cambridge, the trips vehicles are making within the city each day and the peak traffic times. Our spatial big data platform highlighted the fact that the majority of delivery vehicles enter Cambridge via the M11 and A14, but one of the busiest delivery was in the city centre.

For city planners, this could suggest a redesign of the central area to address the problem - or rerouting delivery traffic away from that area. It illustrates how bringing data to life gives a valuable new perspective on a problem.

Daniel Clarke, Digital Programme Manager, Smart Cambridgeshire said, *"GeoSpock's experience of working with city data and cutting-edge platform is showing how we can extract value and insights from data, driving real change"*

Global App Testing

Looking for best-in-class functional web & app testing? You found it.

Manage, execute and analyse test results to help you release high quality software anywhere in the world - we call it impact-first testing.

Speak to our team

Testing 5,000 Apps in 4 Weeks with Facebook

The tech giant tasked us with testing 5,000 of the largest apps that use Facebook Login. Within a week, we were able to assess Facebook's needs, worries, and goals. We recruited 100 of the best and most relevant testers and after the first week, over one thousand apps had been tested. Our results exceeded Facebook's expectations: Testing scaled at speed In just over four weeks, we tested 5,000 apps and found critical issues in over 900 cases. We provided clear, concise and actionable bug reports.

The migration was a success, with no negative impact on site users. Transparency and control through reports and a dashboard with detailed results, the Facebook Platform team had complete visibility over progress of the entire test cycle.

"Instead of testing the top 500 apps as planned, partnering with Global App Testing allowed us to increase our testing surface area by an order of magnitude within the same time window."

Global Reach Technology

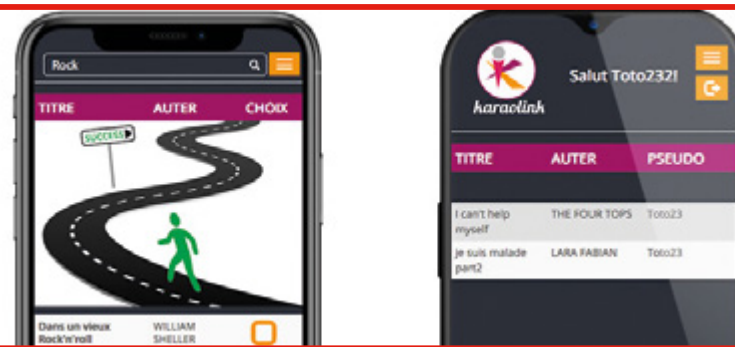

Link NYC authentication & analytics

LinkNYC is delivered by the City of New York and CityBridge, a NYC-based consortium of leading experts in technology, media, connectivity and user experience. Working with lead consortium member, Intersection, GlobalReach Technology provides the captive portal, user authentication and analytics behind the service, through its cloud-based Wi-Fi service management solution.

Including RADIUS / AAA, custom captive portal and a Passpoint Hotspot 2.0 online signup server (OSU) as standard, the single, scalable platform is being used to connect LinkNYC users and to manage and analyze the service.

Imediavan

KARAOLINK: A bespoke web/app development

KARAOLINK DJ team is specialised in using Karaoke as the main tool for their sessions. They were looking to create a new tool that would help them to lose their post-its and printed song listings. We have been working very closely with their team in order to create the perfect tool that will engage singers and DJs. We created a web-based app that does not need to download any app to start using it.

Using KARAOLINK, singers can see the complete list or choose the title/singer/year/genre... using the integrated search engine. They can select the songs they want to sing, the DJ will then be warned simultaneously on his pc or tablet, in a list that will indicate the order of passage.

Nicolas Astier (CEO) said, *“Working with Imediavan has been crucial for the early stages of our project. We initially had a limited budget for creating everything but they helped us by scaling the developments and allowing us to rapidly launch our product. Affordable and efficient team.”*

Indus Net Technologies

Ageas brings smarter distribution system for their super brokers

With more than 8 million customers across the UK and EU, Ageas was becoming one of the fastest-growing insurance. However, for steady growth, they wanted to empower their Super Brokers by automating onboarding, policy management, policy claims using any mobile device. INT achieved this goal by using its industry understanding, customer journey with simplified workflows and a high standard of coding followed by multi-phase testing and deployment. This integrated system has a highly secure Centralized Card Payment System (CCPS), which follows the PCI-DSS standards.

With this application, a number of new avenues got opened for the firm including faster selling and smarter reporting mechanism. Modules like a quote & buy, policy management, financial reporting, analytical reporting made things transparency and fluid.

Raju Singh, Project Head, said, *"People want to buy travel policies on-the-go, using mobile devices. This market need spurred the client to request an application. All that was once manually done is now fully automated with complete transparency helping both customers and agents to use the features in a click."*

ip.access

Tyne & Wear Fire and Rescue Service, UK Dedicated 4G LTE Private Network

- Secure, critical communications network
 - Five-mile radius coverage
 - Real-time, high-definition video streams from:
 - body-worn cameras,
 - Unmanned Aerial Vehicle (UAV) drones
 - Four deployable point-tilt-zoom (PTZ) cameras, two of which are thermal cameras.
- Images are streamed not only into the command vehicle, but also to anywhere within the TWFRS organization.

Delivered in partnership with:

© 2018 ip.access Ltd

Tyne & Wear Fire and Rescue Service (TWFRS) includes 12 fire stations that are responsible for the communities of Gateshead, Newcastle, North Tyneside, South Tyneside and Sunderland.

ip.access

Private network for Tyne and Wear Fire and Rescue Service

The carrier-grade private LTE network from market leading ip.access provides the command and control vehicle with critical communications regardless of location, even where there is limited cellular coverage. The private LTE solution is deployed in its own dedicated spectrum that works in harmony with Wi-Fi and public cellular operators and is not subject to congestion or interference, which ensures a guaranteed Quality of Service. This solution, which is available without any dependency on future 3GPP standardisation or national programmes such as ESMCP in the UK or FirstNet in the US, demonstrates the strength of

capability offered by innovative companies like ip.access and its partners in delivering carrier grade Private LTE solutions today. The private LTE network primarily backhauls over incumbent 4G and falls-over to auto-pointing satellite. Communication services are protected by secure VPN technology.

Ken Corbett, TWFRS Operations Department Station Manager said, *"The vehicle has been used at incidents and exercises. Having our own, secure communications platform has enabled us to enhance our command and control at incidents and improve the safety of our firefighters and the community."*

IrisGuard UK

Cash aid distribution via IrisGuard EyePay® and mobile wallet

IrisGuard has partnered up with Zain Cash and the UNHCR and introduced a revolutionary EyePay® Cash platform. Approximately 600,000 refugees and vulnerable families in Iraq receive cash support via UNHCR. EyePay® now enables refugees to cash-out their financial assistance via iris identification. Only the entitled refugee will be able cash-out without the need for any other identification tools which has a huge benefit in reduction of fraud and as such, the much-needed aid is provided to those it is intended for. By integrating the iris technology in the registration and cash-out of assistance to refugees, the disbursement process is set to become more streamlined and secure and quick in comparison to previous process which took

over 15 days. This helps them pay for the key essentials such as rent, food and enables them to be part of their community in a positive way, to rebuild their future and their community.

Imad Malhas, Founder and CEO at IrisGuard said, *“We are delighted to be partnered with Zain Cash and the UNHCR providing a reliable, 100% accurate solution which removes risks, increases beneficiary privacy, improves speed and ultimately ensures that those who need it receive aid faster and in a more secure way.”*

KORE

Stedin: The early adopter's journey to eSIM

Stedin is a large regional grid operator in the Netherlands that is responsible for delivering electricity and gas services to more than 2.2 million commercial and residential properties. The key challenges were, the high cost of a smart meter or SIM replacement, due to technology and carrier “lock-in” without having to physically change the SIM or device and remaining compliant with Dutch Smart Metering standards and emerging telecom legislation. To alleviate these challenges, KORE delivered a multi-faceted advanced connectivity eSIM solution. A carrier-independent OTA platform guaranteed the ability to fully transfer services without physical SIM swaps, facilitated by eSIM technology.

The OTA platform was configured with a Stedin-specific carrier profile enabling Stedin to host its own specific IMSI range to essentially act as an independent carrier to meet regulatory compliance, provide greater support for large-scale rollouts, enhance SIM management capabilities, and ultimately protect the longevity of their connected meters.

Marco Bijvelds, Vice President, Product Management International said, *“Our focus throughout our eSIM journey has been developing a rich ecosystem of carriers, which is critical to leveraging eSIM technology. But more than that, success for our customers is in understanding how to use eSIM to add value and deliver measurable results.”*

Microblink

BlinkID - step towards the typing-free future

Real-life problems are an all-time inspiration for creating new products and solving challenges. There's not a person in the world that likes typing in personal data into online forms. Most of the time, it's taking way too long, or we make numerous mistakes. Our PhotoPay product sped up the payment of utility bills with a phone camera. Automating ID data extraction with BlinkID was a logical step towards the type-free future that is our mission. BlinkID is our first-ever product that's entirely powered by proprietary AI technology. BlinkID is changing millions of lives and habits with intelligent data extraction. We're bringing a truly seamless UX and an uninterrupted scanning flow. There's no need to preselect the country and type of identity document.

BlinkID's AI performs real-time ID card detection and document classification. Also, BlinkID is proven to be faster than any server-side solution out there, enabling instant data entry from ID cards, passports, visas, and work permits in the blink of an eye. Security is an essential part of all Microblink products. All data extraction and processing is done entirely on-device, without any Internet or server connection. In other words, sensitive information never leaves your application. BlinkID found its place in various industries; banks & financial institutions, telecoms, retailers, insurance, system integrators, app developers, startups, and other service & production-oriented companies.

MojoReporter - Publisher's Toolbox

MojoReporter: the evolution of mobile media capture, intelligence and distribution.

Publisher's Toolbox's MojoReporter team began working with KM Media Group, which included KMTV - the county of Kent's dedicated TV channel. MojoReporter was implemented across their several newsrooms, giving KMTV a private file sharing and collaboration platform. This allowed their mobile journalists to send digital packages to multiple users for review, back-up or publication. A simple phone app interface makes it easy for journalists to type headlines, attach multimedia content and send to selected destinations. Compression for multiple media types means reporters can upload content to KMTV's team dashboard, giving the newsroom instant access to content from the field. Videos are transcoded into multiple formats, which can be downloaded

quickly and easily from a central location for breaking news stories. This has seen a dramatic increase in the quality and quantity of stories submitted, allowing KMTV to tell stories that usually wouldn't have seen the light of day.

Andy Richards, KMTV editor in chief said, *"Our relationship with MojoReporter has changed the way KMTV delivers its content. We've gone from having around a dozen content packages filed each month by our reporters to more than sixty after the first month of using MojoReporter. That's now risen exponentially."*

MYCOM OSI

MYCOM OSI's Assurance Cloud™ SaaS deployed at Globe Telecom

Globe Telecom, the largest CSP in the Philippines with over 80m customers, has deployed MYCOM OSI's Assurance Cloud™, powered by AWS, joining UK's Three and Vodafone and several other Tier 1 CSPs implementing Service Assurance in the public cloud.

Hosted in AWS' Singapore Availability Zone, the deployment has enabled Globe Telecom to achieve significant cloud-based benefits while benefiting from a solution that is faster than on-premise systems, despite the lack of physical co-location with network infrastructure.

Mymanu

Mymanu and Marriott TestBED

As Marriott is a truly international company, they were searching for a way to make all guests feel welcome and able to enjoy their stay fully and feel at home, regardless of language or nationality. We undertook a pilot at the Madrid Marriott Auditorium Hotel and Conference centre. The site covers 869 rooms, including 56 meeting rooms, an auditorium for up to 2000 people and 15,5000 sq. metres of exhibition hall space. We harvested a wealth of data which demonstrated to Marriott just how useful our technology was to their visitors. We found that 75% of surveyed guests felt comfortable using the translation system, improving their communication

with associates of different nationalities. 100% of surveyed event organisers said they would expect a significant increase in networking opportunities by using Mymanu technology. They were also able to foresee a reduction in costs for doing so.

According to a Marriott guest, *"I found communicating with the staff much easier with Mymanu technology. Instead of coming up against the usual language barrier, I was able to quickly get across what I wanted to say and receive a reply in next to no time."*

Omnis Software

Q-Med drastically simplifies management of aeromedical certificates of fitness.

The Q.MED-AERO solution allows doctors to enter data using an Omnis desktop application, while pilots, flight attendants and air traffic controllers apply for an aeromedical certificate by mobile phone or using the web app. The pilots record their data in an encrypted database that can only be accessed by the pilot and the authorized doctor. When renewing certificates Q.MED-AERO allows the pilots to copy an earlier application and only enter the changes saving a lot of time and effort. When the certificate application process is complete, the applicant selects a doctor and the Q.MED system sends the doctor an email with a token that allows access to the application. The doctor uses this

token to access the data (using the Omnis Studio REST API) and transfers it to their desktop application. The doctor's data can be automatically transmitted to the German Federal Aviation Authority.

Christoph Schwerdtner (Medizin-Software) said, *"With Omnis Studio we can develop solutions in a fraction of the time using only one development environment. We develop desktop applications for Windows, MacOS and web-based solutions. For 30 years we've been working with Omnis and haven't found another tool that's as flexible."*

Pod Group

Golf course intelligence software

Handling player pace round golf courses is essential in improving efficiency and player satisfaction. Tagmarshal created a sophisticated tracking system allowing clubs to better control player flow and reduce round times, using tags that can be clipped to a golf caddy and relay data in real-time back to the marshal or golf manager. Tagmarshal needed a connectivity provider who could ensure access to robust, reliable connectivity in a variety of countries and in areas where different networks offered the strongest signal. They wanted to deal with one global connectivity provider who could meet all their needs. One of the main benefits is the flexibility offered by Pod in the size of the data bundles which can be customized to include very small bundles required by

Tagmarshal Classic Tags. Pod Group's API allowed for easy integration with Tagmarshal's systems, meaning they could set up and get started quickly.

Bodo Sieber said, *"The technical support is amazing, really top level and truly 24/7 and we appreciate the level the team go to when resolving technical queries. Customer success is central to Tagmarshal, and Pod helps us to deliver exceptional service to our partners."*

Publisher's Toolbox

BiblioDAM: Simple, powerful digital asset management

Independent Media Group have over 80 publications in their stable. They needed a platform that would safeguard their media assets, integrate with their CMS platform, and provide access to multiple editorial teams. The Publisher's Toolbox digital asset management platform, BiblioDAM, provided the solution. BiblioDAM is powered by cutting edge AWS technology, allowing organisations to centrally store, manage and search photos, videos, audio and PDF files.

FEATURES - Bulk media upload and indexing - Powerful search capability with multiple taxonomy layers - Flexible media processing and downloading - PDF text searchability - CMS integration - Copyright monitoring - Access via

Gmail, Facebook or Twitter Over 800 Independent Media editorial staff now rely on BiblioDAM to provide the content they need to do their job, by ensuring access to digital assets anywhere, anytime, on any device. To discover how BiblioDAM can revolutionise the way you protect your media assets, visit www.bibliodam.com.

Rich Cheary, Publisher's Toolbox CEO said, *"BiblioDAM allows any content producer who has a number of media archives or websites under management to benefit from a centralised and reliable cloud archive wrapped in AI media services to bring intelligence to the archive"*

pureLiFi

LiFi goes to school

Connectivity in the classroom opens up a world of knowledge that extends far beyond any collection of textbooks or jotters. However, not all schools are connected equally, and poor connectivity can mean student fall victim to the digital divide. LiFi at school makes a world of difference.

Ayrshire, Scotland's Kyle Academy deployed pureLiFi technology in the classroom, giving students light-powered access to digital resources such as videos and e-books, which can overload traditional, bandwidth-limited networks such as WiFi.

Students stream videos and access educational tools where they struggled before, meaning less

time downloading and more time learning. LiFi also sets the stage for next generation teaching tools like virtual and augmented reality.

Student Toby Nixon said, "It's exciting to be part the world's first LiFi deployment in a school, especially because it's a technology born in Scotland, a country with a proud history of innovation."

Alistair Banham, CEO of pureLiFi said, *"The students at Kyle Academy are early adopters of technology that will someday be in every light and every device connecting everyone and everything. This is an opportunity we can all be excited about"*

Radio Design

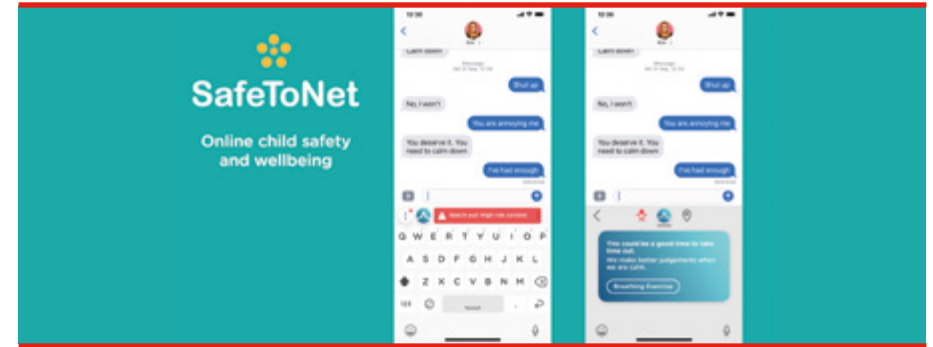

Mobile deployment problems solved with Radio Design's innovative technology

As the populations of our cities increases, so too does the demand for mobile data. However, restricted space in built-up areas, combined with regulatory pressure to preserve the landscape, results in very limited opportunities to effectively deploy new base station sites. In one European city, a mobile operator found their monopole solution addressed the space and visual concerns they were under, but did not allow them the space they needed internally to combine and amplify their radios. Radio Design's revolutionary concept, the Active RF Router™, took the complexity out of site design by putting the splitting, combining, and uplink amplification into one optimized

box: addressing their space and visual concerns as well as resulting in CAPEX and OPEX savings for the customer. Radio Design's consultative approach meant the specific needs of the customer were addressed, with industry-leading innovative technology.

Martin Gostling, Managing Director of Radio Design said, *"I am proud that our Active RF Router™ has demonstrated our technical and commercial ability to develop an innovative and tailored solution, directly in response to our customer's needs."*

SafeToNet

Well, why wouldn't you do that?

We safeguard children online. Our AI-powered keyboard intervenes at online moments of risk and nudges the child's response such that they become safer online digital citizens. The product is aimed at the "my first smartphone" child, which is now around 9 years old. One of our customers installed SafeToNet on his daughter's phone and after a couple of weeks asked what she thought of SafeToNet. She replied "What's SafeToNet?". This was a conversation moment for the father, who explained the idea about safeguarding through the keyboard. Her response was "Well, why wouldn't you do that?". For us, this is perfect.

The young girl was online, communicating with her friends as she has the right to do, didn't notice the safeguarding keyboard was different from the regular unsafe keyboard and was bemused why smartphones don't all come with this kind of feature.

Annabel, 10 said, *"Well, why wouldn't you do that?"*

Strategic Imperatives

Transforming Telecoms: It's in our DNA

Founded in 2006, Strategic Imperatives is the UK's leading provider of SaaS solutions to telecoms providers. Our focus is our ground-breaking cloud-native SaaS monetisation solution, Elevate, launched to revolutionise the telecoms billing market. Born from the dedication and passion of a group of technologists and telecom veterans who believe in challenging the status quo and making things better, Elevate is making a clear, measurable and exceptional difference to our customers: • Timescale to launch new propositions/promotions reduced dramatically • Agile service providers empowered with Elevate's 'just in time' view of performance, profitability and margins • Intelligent customer base segmentation and our multi-brand

support has given our customers a new levels of business flexibility • Bill-run time slashed from days to minutes with our unique OnDemand auto scaling capability Our platform has completely transformed billing and service monetisation for our customers and empowered them to capitalise on the rapid advances in the industry.

Wail Sabbagh, Managing Director said, *"Elevate is transforming billing and service monetisation into a modern, blazing fast, fully integrated, and extremely flexible cloud-native SaaS solution. Elevate has completely disrupted a complacent billing landscape and empowered service to seamlessly monetise the continually evolving telecoms value chain."*

Streamhub

Fuji TV - major Japanese broadcaster.

Solution provided by Streamhub:

- Single Video Data Platform across devices and services, with custom views for different stakeholders.
- Audience profiles built combining internal CRM data and data purchased from third parties.
- APIs and integration engine providing easy means of internalising and externalising data in real time.

Beneficial outcomes of project:

- Improved Audience Retention: Relevant selection and promotion to target audience on AVOD, SVOD and Live services based on precise audience data.

- Increase in Sales: Higher prices earned from advertisers based on richer consolidated audience profiles.
- Reduced Cost, Time and Resources: Rapid compilation of reports to half a day from 1 week.
- Previous Proprietary Video Analytic Tools became obsolete reducing resources spent on support and maintenance.

Derek Boyd, Director, The Scotland 5G Centre said, *"The significance of the projects enabled by the Scotland 5G Centre reaches far beyond Scotland itself – the expertise and knowledge gained will be relevant to businesses, researchers and public sector all over the world."*

The Scotland 5G Centre

Scotland moves into the 5G fast lane

Pushing ahead on 5G can be transformational not just for businesses large and small, but for nations. An analysis by Deloitte estimated the rewards from embracing 5G potential could include £17bn added to Scotland's GDP and 160,000 jobs. So, how to support that? By setting up the Scotland 5G Centre, a new partnership between leading Scottish universities and the Scottish Futures Trust, with investment from the Scottish Government. Already, it is driving three projects to accelerate 5G:

- **Rural Connectivity:** this project aims to provide wireless and mobile connectivity to rural and remote regions, and is led by University of Strathclyde.

- **Innovation Districts:** the project, led by University of Glasgow, is working on adopting 5G technology at the heart of urban areas, with the creation of a 5G-enabled testbed.
- **Infrastructure Deployment Accelerator:** Scottish Futures Trust will simplify arrangements between operators and public sector asset owners to deploy 5G networks.

Derek Boyd, Director, The Scotland 5G Centre said, *"The significance of the projects enabled by the Scotland 5G Centre reaches far beyond Scotland itself – the expertise and knowledge gained will be relevant to businesses, researchers and public sector all over the world."*

TrainAsONE

An Incurable Disease - TrainAsONE helped change my Life

I came to running late, I'm 39 and have been running for 2 years. I played rugby in my twenties, injuries, marriage, kids, the usual story! Got to late 30's, health issues and the scales were not my friend. I thought I would start running, this from the kid that at school cross country would sneak a shortcut! I hated running! When I first started it was tough, my training was aimless, I would just go and run with no goal, no focus and ultimately no plan. Then a mate of mine suggested TrainAsONE. I signed up and my running changed for the better from that day. I am now in marathon training using TrainAsONE and owe all of my personal success, gains and achievements to an app!

TrainAsONE helped change my life, I'm 40 in 6 months time and I have never been in better shape and fitness.

"I have an incurable bowel disease making running tricky, and my health and fitness is as important as my medication. TrainAsONE, which uses my data to create my personal plan, has significantly helped me to manage my disease. My gastroenterology consultant is so impressed that he now uses TrainAsONE too!"

Truphone

Truphone's network provides a globally scalable service to MSA

MSA is a leader in high-consequence threat detection, and its advanced technology needs to be seamlessly connected to its global emergency operation centre in the event of a threat. The organisation needed a single vendor to align communication for its Light Safety product across 47 countries, through direct calls and an alternate messaging service. As a US-based company dealing primarily in Europe, fluid communication was proving challenging. An overarching system was required - one that would allow large quantities of data to be transferred across the globe with speed, ease and reliability. Truphone's state-of-the-art SIM technology enables connection from the moment a device is switched on.

No complicated activation process, no wordy manual, just connectivity from the touch of a button. Working with Truphone allowed MSA to bypass lengthy and costly admin processes. It also steered them away from third-party networks that don't simply support this fast-paced industry's requirements.

Marc Weathers, Director of Information Technology at MSA said, *"Due to the nature of our work, we require connection stability. Working with Truphone has not only afforded us this reliability, it has allowed us to open up to new markets that weren't accessible before"*

Universal Smart Cards

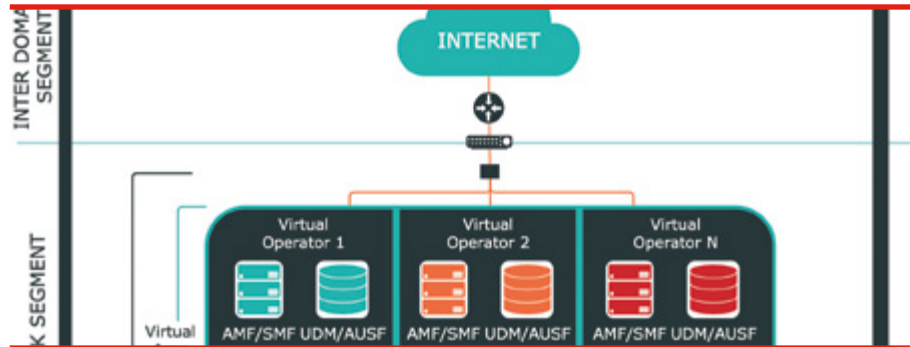

Converting Lucozade bottles into payment devices

Lucozade Energy approached us with a problem - how to turn a bottle into a payment device - perfect opportunity for Universal Smart Pay. With partners DIGISEQ we delivered the Much Better Bank Accounts to the bottles without the need for complexity but maintaining the security that is required for payments. The bottles were then used on London Underground to pay for travel! A brilliant case study in turning an everyday object into a payment device. Our re-usable coffee cups including payment capability will be hitting the stores this spring time - look out for widespread media coverage

Alasdair Nutt, Universal Smart Cards said, *"it was an interesting problem to solve. We provided our skills and expertise of smart devices to exceed expectations. We were delighted with the results and it's great to see Wearable style contactless payments used in such an innovative way."*

University of the West of Scotland (UWS)

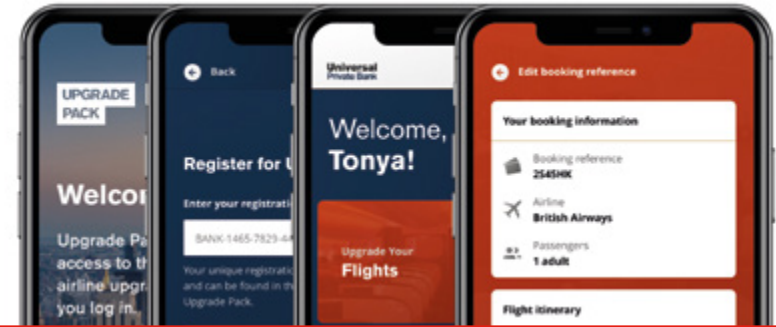

E2E 5G Network Slicing Guaranteeing QoS for Verticals

The 5G Hub at UWS has achieved End-to-End (E2E) 5G Network Slicing in the context of the flagship EU 5G-PPP SliceNet project. The challenge was to guarantee the Quality of Service (QoS) for different vertical businesses that have divergent QoS requirements for different heterogeneous use cases whilst sharing the same physical 5G infrastructure network. UWS has designed and developed a novel solution based on flexible combination of hardware acceleration and software data path. Empirical results have demonstrated the advantageous benefits of provisioning high throughput (up to 100 Gbps) and low latency (less than 1ms) E2E network slices. The slices have been created for representative vertical businesses

and the piloted use cases include smart grid self-healing, smart city intelligent lighting, and eHealth ambulance, in collaboration with SliceNet partners. The management of such a large-scale network slicing system is based on autonomous control loop empowered by AI/ML technologies.

Jose Alcaraz-Calero and Qi Wang, SliceNet Technical Managers said, *“The 5G Hub at UWS contributes to SliceNet innovations. It enables collaboration among network operators in end-to-end network slicing provisioning, allows vertical businesses to fulfil their business requirements in customised use cases, and leverages AI to enable intelligent operations for network operators.”*

Upgrade Pack

Building the world's first dedicated travel upgrade app

Getting a flight or hotel upgrade normally requires a hefty upfront payment, lots of loyalty points, a fingers crossed bid on an auction site, or failing all that, an awkward request at the gate or desk. Upgrade Pack is putting an end to all of that with our unique platform that helps those serious about upgrading to do so with any of our airline and hotel partners globally, at exclusive discounts. As well as giving our users a mobile-first gateway to exclusive discounts on seat and room upgrades in real-time, Upgrade Pack equips our banking and corporate clients with a differentiated, value-led customer and employee reward.

Since establishing in 2018, the Upgrade Pack has secured over £5m in funding, scaled internationally and grown to a 30-strong team, as we prepare to roll out our highly anticipated app in 2020.

Urchana Moudgil, Co-Founder Upgrade Pack said, *“Upgrade Pack enables innovative companies to reward and retain their most valuable customers and employees, by giving them access to something everyone would choose if they had the choice: upgraded travel.”*

Viewing Online

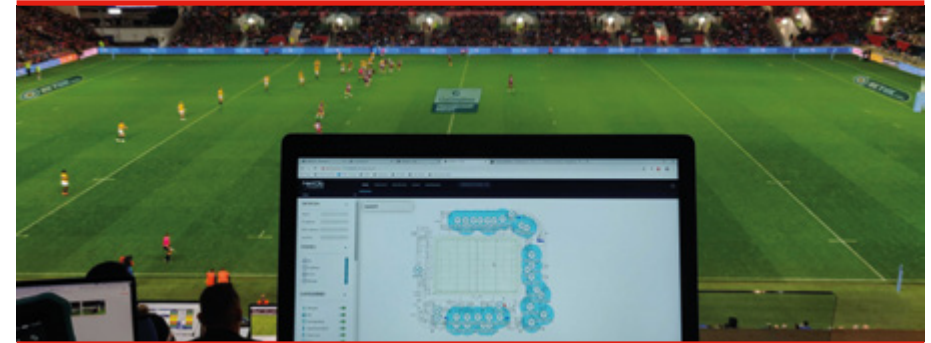

BreckWorld (www.breckworld.com) - our first government tourism app

BreckWorld was built with our inferior, older platform. It was a world first test case for combining geo technology, augmented & virtual reality to attract footfall and spending to destinations (Breckland District in this case). The project led us to discover many new market opportunities and begin R&D on scalable, commercial applications of our natively built, proprietary technology.

Ryan Baxter, Founder & CEO, Viewing Online said, *"This was our first ever app so we were thrown in at the deep end and just about floated. BreckWorld opened our eyes to the possibility of new layers of information covering the world, destination by destination. Working with Stephen Fry on the app was bonkersly brilliant."*

Zeetta Networks

Ashton Gate Stadium - first commercial deployment of NetOS Enterprise™ 2018

Ashton Gate Stadium is the largest stadium in South-West England with a 27,000 capacity. It is home to Bristol City FC and Bristol Bears RFC. It has state-of-the-art conference facilities and is a major exhibition and hospitality venue. Its network has in excess of 300 managed network elements, 750 tracked elements and is configured to support high crowd densities. It also supports a huge number of services from electronic point-of-sale (ePOS) terminals in bars to CCTV to electronic turnstiles and player biometrics. The stadium network requires a specialist managed service provider (MSP) team. Zeetta Networks deployed NetOS Enterprise™ in 2018 as a network control and management

software platform designed specifically for complex enterprises and managed service providers. NetOS Enterprise was ideal for managing complex networks where there are multiple mission-critical and business-critical services running in areas with high demand for digital connectivity. Deployment reduced overall operational costs by ~20%.

Martin Griffiths Chairman - Ashton Gate Stadium said, *"...we are just scratching the surface of what the NetOS platform can deliver andI'm confident that we will be able to drive greater fan engagement along with significant returns to our businesses."*

Technology & Development

The Department for International Development (DFID) leads the UK's work to end extreme poverty. We are tackling the global challenges of our time including poverty and disease, mass migration, insecurity and conflict. Our work is building a safer, healthier, more prosperous world for people in developing countries and in the UK too.

Technology has the potential to revolutionise the lives of the poor, unlock development and prosperity, and accelerate progress towards the Global Goals. The rapid expansion of mobile phones and internet access in poor countries offers unique opportunities to support and enhance DFID's work.

DFID has been working closely with the GSMA since 2013, to identify and support the development and use of new, innovative ways in which

mobile phone technologies and mobile network infrastructure can be used to improve the reach, delivery and affordability of life-enhancing services to poor people in Africa and Asia. As a result of this work over 35 million poor people are expected to benefit from improved access to life enhancing services by 2020.

If you're interested in learning more visit www.gov.uk/dfid or email digital@dfid.gov.uk

Here are a few examples of the work British business is doing for development:

eWATERpay

eWATERpay is a cheap, simple technology that is allowing users to purchase credit through several methods, including using the app on smartphones, purchasing through mobile money or receiving a remote gift via PayPal. Winner of MWC's Congress award for Outstanding Mobile Contribution to the SDGs in 2018.

SimPrints

SimPrints builds biometric fingerprint technology for people in the developing world who lack proof of legal identity. The SimPrints system allows health workers to access full health records through a hand-held fingerprint scanner synced through Bluetooth to their smartphone.

Loowatt

Loowatt is a waterless toilet that people can pay to both rent and maintain with just a text message from their mobile phones. This removes the need for expensive plumbing or civic infrastructure.

Loowatt has also designed a way to turn excrement into electricity, biogas and fertiliser.

Animal Dynamics

Animal Dynamics is a system of autonomous powered paragliders. They are currently developing a range of unmanned aerial delivery vehicles called Stork. Stork can be used to supply medical equipment, food, fuel and vehicle parts to front-line users in humanitarian and development contexts.

British tea and coffee partners

SHELTON'S COFFEE

www.sheltonscoffee.co.uk

Shelton's Coffee aims to modernise the Coffee category by transforming the highest quality of Single Origin Colombian coffee beans into simple, stylish and innovative Coffee Hearts that can be enjoyed whenever and wherever without using machines. It offers a practical solution for the Food Service Industry while displaying a beautiful presentation for the High-end retail market. The product is currently available in the UK in over a hundred high end retailers such as Harrods and Selfridges.

Tregothnan

www.tregothnan.co.uk

Tregothnan began supplying Britain's first homegrown tea in 2005, creating the ultimate in Britishness in every cup. The world's first true British tea has been heralded as the 'new Darjeeling'. As well as growing English tea and a vast range of plants that create the delicious herbal infusions, a diversity of lands allows them to produce Cornish Manuka and wildflower honeys, rare Kea plum jam, and sustainable coppiced charcoal.
