

The UK's Digital Health Playbook - The 'First 100' Companies

February 2021

Foreword

Digital Health is rightly seen as the answer to many of the challenges facing global healthcare. The role of digital technology in realising the dream of accessible, affordable and sustainable care has grown across the entire range of health economies in not only serving current needs but in building the basis for the healthcare of the future: personalised, digital by default and truly patient centric.

Dr Mike Short CBE

Chief Scientific Adviser
Department for International Trade

The UK has long prided itself as being a hotbed of innovation and the British Government's ongoing investment in growing our capabilities in areas such as AI and more broadly around Data Driven Healthcare, has further fuelled the creation of cutting edge, evidence-based solutions. Solutions which have the key to unlock global challenges, effectively.

The 'First 100' is our answer to a related but slightly different question - how do we find the best of British talent in Digital Health that's ready to go global and link it with that ever expanding worldwide opportunity? Healthcare UK, part of the Department for International Trade, has invested significant effort to identify, engage with and showcase some of the UK's leading talent, which will grow over time.

The 'First 100 companies' were selected after a rigorous process based on a range of criteria including how committed they were to export and international expansion, the global uniqueness of their innovation, a track-record of working collaboratively with Healthcare UK, their responsiveness, and how well they represent the UK journey and direction in digital health, particularly with the NHS. The list will be reviewed and maintained regularly and released formally twice a year.

However, the picture of talent and innovation in the UK is a fast evolving one with new pioneers emerging daily. We hope through the First 100, we will reach out to those who are not just leaders in their field but are willing to find new frontiers to make an impact.

For all enquiries, or for an introduction to one of the companies, or for any other information:

Covid19 and Digital Health - Unlocking Global Healthcare Challenges

Collaborate With Us

Digital Health means we can collect and analyse data to predict disease and intervene quicker. It means physicians have access to patient notes when they need them to make better decisions. It means patients can be seen by medical professionals without travelling. It means citizens can educate themselves on their health and wellness. It means we can use machines to do basic tasks and free up skilled staff to do more caring. It means we can do far more with less.

Digital Health uses advances in computing power and data techniques to make healthcare better, safer, faster, more accurate and reach further. Without it, we simply don't have the global workforce to cope with the demand especially with ageing populations, issues around access to care and the growth of non-communicable diseases like diabetes and cancer. It isn't sustainable to let people get sick and then bring them in physically into expensive hospital facilities, to try to treat them.

By then it is often too late. We need to move towards more virtual and remote care immediately with better prediction. We must focus on prevention and encourage independence, with more support for citizens to self-care.

The coronavirus pandemic has made this even more apparent and stretched health systems to their limits, raising important questions including;

- How to model disease and track infection?
- How to inform a populace of what to do?
- How to mobilise staff and resources at scale?
- How to train staff at a distance?
- How to test, diagnose, treat and monitor patients remotely?
- How to relieve pressure and free capacity?
- How to keep patients out of hospital and encourage self-care, especially for those with existing conditions?
- How to succeed at transforming our services rapidly and safely?
- Why did we routinely see so many patients in person anyway?
- How do we 'reset' our methods of service delivery and models of care?

Digital Health is the answer to all these questions.

“I am delighted that Healthcare UK has developed this playbook for some of the best British innovation in digital health and care. They have been instrumental in some incredibly exciting technology-based initiatives, which have supported us through Covid and also the largest transformation in Europe in both the public and private sector. Many of these firms are working closely with our National Health Service (NHS) making a huge difference to treatment, prevention and care across our whole population. They represent immense promise and potential and many are already collaborating on a global scale.”

Noel Gordon,
Chair, Healthcare UK Advisory Board

Our team

DIT Digital Health Specialist

Healthcare UK (Department for International Trade)

Hassan is Digital Health Specialist at Healthcare UK, offering subject matter expertise and connections from a sector perspective to DIT commercial teams in over 100 UK embassies as well as innovators, investors, Governments and health systems globally.

His background is in frontline social work, NHS informatics and public health. He later co-founded Health iQ - an award-winning agency focusing on real world evidence and health analytics and held CIO and Chief Commercial Officer positions before its acquisition and his exit in 2019.

He is a Director at Vita Healthcare, Strategy Lead at The Source Group, a mentor for the NHS Innovation Accelerator and holds an Honorary Research post at Imperial College London.

Hassan Chaudhury

hassan.chaudhury@trade.gov.uk

Our team

DIT South Asia and Digital Healthcare Lead

Healthcare UK (Department for International Trade)

Madhukar leads Healthcare UK's work in South Asia as well as being the global lead for Digital Health, responsible for supporting UK organisations in the health tech space win business in key markets across the world.

He has conceptualised and implemented ground-breaking initiatives such as the Digital Health demonstrator in China, the Healthcare AI Catalyst in India and has led trade missions to a number of markets including Brazil, UAE, China and India.

Madhukar's management consulting career has spanned advising the NHS on the assistive technology programme, designing a new Telecare service for one of the largest pharmaceutical majors in the world, guiding the UK's Department of Health and Social Care on the national business case for mobile working in community services, and setting up a Telehealth venture in India. He is an MBA alumnus of the Cranfield School of Management.

Madhukar Bose

madhukar.bose@trade.gov.uk

Our Partners

Thanks go to Scottish Development International (SDI), ECHAlliance (European Connected Health Alliance), ABHI, The AHSN Network, Innovate UK, Tech Nation, HIMSS, National Association of Primary Care (NAPC), Octopus Ventures, techUK, Health Plus Care, NHS Digital, Boehringer Ingelheim and Samsung, plus a range of experts for their expert input and kind support.

The UK digital health solutions

Self-care

How can we support citizens and patients to better look after themselves? To take charge of their own conditions and try to work on wellness and prevention rather than cure, something increasingly prized by public health systems and insurers alike, often described as self-care. This includes patients seeking consultations, advice, or to better understand and manage their health information. This involves better health and patient outcomes, with the patient receiving better care and experience. This level of care offers empowerment for the person in managing their own care and puts less strain on the health systems.

Triage and Pre-Assessment

Streamlining large groups of patients takes time and resource. This area explores the new technologies that can support patients to offer quicker, effective services, whilst optimising the care the patient receives. How do we gather data to know what is going on at a system level?; or signpost services better; stratify patients based on risk more intelligently; and redirect precisely to the most appropriate care setting. Can we avoid sending everyone via emergency departments? Our UK technologies support pre-assessment, for example in pre-operative settings, as well as wayfinding, streaming and redirection, particularly in urgent and emergency settings.

The UK digital health solutions

Screening and Diagnostics

The demand for AI applications in medical imaging is growing rapidly but it is challenging for healthcare facilities to deploy AI applications. Every application is time consuming and requires significant IT and clinical resources to implement. But we know that early diagnosis and intervention improves outcomes, saves lives and optimises resources. Find out how our UK companies are improving public health, surveillance, screening programmes and diagnostics, particularly as part of a long term strategy and also at the point of care, rather than at a laboratory. The UK companies offer solutions to simplify this process and have been tried and tested in large populations in NHS Hospitals. These companies provide regulatory approved screening and diagnostics applications that add clinical value.

Remote Monitoring and Treatment

How do you monitor patients remotely and maintain the ability to act fast? These digital applications are interventions that are initiated by a physician and linked to a clinical care pathway. It differs from self-care solutions, which are driven by the empowered citizen. These UK solutions allow healthcare providers to reduce risk, cost, and readmissions and demands on your health system, while improving the patient experience, by empowering teams to safely monitor, manage and engage patients at home. How can we prescribe apps known as Digital Therapeutics (DTx) for treatment remotely? And how do we maintain a sense of compassion and community while appreciating there is often stigma attached to accepting these services and that people drop out regularly?

The UK digital health solutions

System Efficiency & Transformation

Deliver improvements in the quality of care, through the use of world-class digital technologies and information. Experts share their learning and experiences through the creation of blueprints to enable others to follow in their footsteps, as quickly and effectively as possible. Some challenge areas include: how do we enable digital transformation? How to do we design healthcare infrastructure? how do we improve system effectiveness and backend efficiency, for example bottleneck analysis, patient flow and clinic rostering? How do we collect data into user-friendly systems? Our exceptional UK companies provide digital solutions to support transformation in all aspects of healthcare.

Data and Analysis

How do we share and make better use of the health data we have, both structured and unstructured, to make more intelligent and timely decisions? This area provides a selection of evidence-based solutions that have seen very successful outcomes for our UK healthcare providers, both public and private.

The UK digital health solutions

Augmented Healthcare Professionals

These UK solutions have been supporting the NHS workforce and building future capability and capacity in areas such as skills and knowledge. How can we augment our people? For example; automate routine tasks; support clinical teams to carry out their roles more efficiently; support non-clinical and less qualified staff to take on more of the burden of healthcare provision; and generally stretch our qualified teams to do more while avoiding burnout. How do we offer medical education and training in scalable digital environments?

Collaboration & Communication

Technology can support getting critical information and at the right time. Digital applications are achieving improved communication whether to patients or between staff themselves so they can collaborate. In addition companies that want to engage workforces genuinely, for example improve their wellbeing or gain new ideas on quality improvement and safety, can use these models and technologies in their corporate environments.

The UK digital health solutions

Future Tech

There are exciting new innovations in what is becoming possible for healthtech, taking advantage of major opportunities in healthcare. For example our UK companies are offering genomics for precision medicine, quantum computing, AR/VR, 3D printing and wearables.

Healthy Ageing

The UK's Industrial Strategy identified Grand Challenges to put the UK at the forefront of the industries of the future, ensuring that the UK takes advantage of major global changes, improving people's lives and the country's productivity. They included AI, data and ageing society. There are many UK companies who offer solutions to support the health and well-being of populations, as they become older and more reliant on health systems.

Our proposal to you

Examine what we've done

Adopt what feels right for you

Collaborate with us

The UK is a global leader

The UK is a genuine global leader in developing brand new digital health innovation and getting it to market, regulating it and then finally validating it at scale. It is one of the best places in the world to start a digital health company, with unparalleled support structures for innovation.

Companies that prosper in the UK are well-prepared to scale abroad because they have succeeded in a challenging market and invested in their innovation. Global firms often use the UK as a launchpad into other markets, to find talent, test their ideas, get onto the radar of investors and to seek acquisition.

Future Tech

The UK companies were selected after a rigorous process, and were judged on a range of criteria including how committed they were to export and international expansion, their responsiveness, their ethics and values, any track-record of working collaboratively with Healthcare UK, the global uniqueness of their innovation, and how well they represent the UK journey and direction in digital health, particularly with the NHS. This report will be updated twice a year. For those who wish to put forward a UK company for consideration please email healthcare.uk@trade.gov.uk.

Acadiant

Company Profile:

Acadiant design custom software solutions to solve specific healthcare challenges using an innovative platform; secure, scalable, intuitive, compliant and interoperable. One of their solutions is SMART, the most comprehensive mortality analysis suite in the NHS. Another solution is Maternity Direct, a secure telemedicine chat app connecting pregnant women with midwives to answer non-urgent queries by text and storing their chat in the hospital's medical record system.

Acadiant works closely with healthcare professionals to understand their challenges and build future-proof software that fits their needs, as well as providing a platform they enjoy using.

Adviseinc

Company Profile:

AdviseInc's mission is to #MakeSense of healthcare spend data. We identify significant financial benefits for healthcare systems by joining our award winning analytical solutions with artificial intelligence and commercial / clinical expertise.

We developed the world's first country-wide product price benchmarking solution, comparing like-for-like purchases for over £15bn of UK healthcare spend, across 60,000 suppliers and over 2m products. We extract information from your raw data and add insights to drive actionable intelligence for our customers - including over 200 UK public and private hospitals, the MedTech supply base and international hospital groups in the USA, Europe and Australia. Our solutions in the UK have saved hundreds of millions of pounds for taxpayers over the past 6 years.

We've proven time and time again to reduce cost, improve processes, reduce risk and drive greater value for money.

Allocate

Company Profile:

Allocate's workforce technology is enabling the delivery of safe and effective care at optimal cost, by helping organisations to have the right people in the right place at the right time. Alongside automating sophisticated scheduling and ensuring accurate pay for staff that have complex pay rules, it is unique in providing additional benefits to improve the safety of staffing given changing patient needs, the management of contingent workforce, and the engagement of staff through the dedicated app. It is used to plan the working lives of a million staff across all workforce groups including doctors, nurses, therapists, care staff, operational staff and administrators.

With 500 employees, including over 190 in research, development and product management functions. Over 200 hospitals use our workforce software.

Optima is workforce technology helping organisations plan, manage, engage and deploy staff safely and efficiently for better patient care.

Ampersand Health

Company Profile:

Ampersand is pioneering the development of personalised digital therapeutics for people with long-term inflammatory conditions.

Co-developed with patients, clinicians and academics, Ampersand's intervention improves QoL and outcomes; reduces hospital attendances by 50%; and is preferred to existing models of care by 85% of patients. We help 35+ hospitals monitor over 60,000 patients across the globe.

Ampersand Health helps people with a range of long term conditions live happier, healthier lives.

Aparito

Company Profile:

Hospital visits and clinic appointments are burdensome for patients. Digital biomarkers and patient generated data, captured and recorded directly from their own home, give a far better insight to disease severity and real-world impact. Our flagship product Atom5™ captures medication adherence, real-time symptoms, patient reported outcomes, via text, photos, videos and voice along with wearable data.

Giving researchers, physicians and health care professionals the insight needed to support their care and communicate back with them directly.

Empowering patients with the tools to share their symptoms and disease severity, via their own smartphones.

Keywords:

Patient generated data, patient centred, connected patient, rare diseases, cancer and clinical trials

Current operating countries:

UK, Global

AT Medics

Company Profile:

AT Group is one of the UK's largest digital primary care provider to the NHS, led by a group of high performing physicians and digital health experts.

Our award-winning platform consists of three areas of expertise:

1. An at-scale, multi-professional and world-class care delivery system
2. Highly advanced and integrated health tech platform including our bespoke telehealth and real-time data analytics solutions
3. Globally accredited training and education programmes for all grades of healthcare staff

We bring together the best of primary care delivery and management, tailor-made and integrated healthcare technology and accredited training and education. Our systems are used by +3.5 million NHS patients.

Blackford Analysis Ltd

Company Profile:

The demand for AI applications in medical imaging is growing rapidly but it is challenging for healthcare facilities to deploy AI applications. Every application is time consuming and requires significant IT and clinical resources to implement. Blackford's approach simplifies the selection, procurement, deployment, administration and support of AI medical imaging applications. Blackford provide a single platform to quickly access and manage a curated marketplace of regulatory approved medical imaging AI applications that add clinical value.

Product is in use in over 700 radiology sites, representing approximately 20% of the US market.

There is a significant opportunity to utilise AI applications in medical imaging departments - Blackford's Platform simplifies the deployment, management and use of those applications.

BMJ

Company Profile:

As a global healthcare knowledge provider, BMJ publishes one of the world's top five most cited general medical journals, The BMJ, and over 70 specialty journals. The company also offers digital professional development learning modules and clinical decision support tools. These products and services help health professionals manage the assessment, diagnosis, treatment and management of patients and improve the quality of care.

More than 5.5 million users access BMJ's websites, including clinicians, nurses, students, academic institutions, hospitals, ministries of health, patients, commercial companies, governments and healthcare organisations. The company publishes in 14 languages and produces specialist publications for 19 countries, including the United States, India, Brazil, Australia, New Zealand, China, and the Middle East.

Since 1840, BMJ has been supporting health professionals to help them make better, more informed decisions. Today, it continues to be one of the world's most trusted sources of information and provider of educational and evidence based, point of care tools.

Augmenting Healthcare Professionals

C the Signs

Company Profile:

C the Signs is an award-winning clinical decision support tool founded by doctors. 1 in 6 deaths globally are due to cancer, making cancer the second leading cause of death worldwide. On average, half of all patients are diagnosed late, with majority dying from the disease. Yet if diagnosed early, over 80% would survive.

The tool uses artificial intelligence mapped with the latest evidence to support healthcare professionals to identify patients at risk of cancer at the earliest and most survivable stage of the disease. Covering the entire spectrum of cancer, C the Signs can identify which cancer(s) a patient is at risk of and, what test, investigation or referral they need in less than 30 seconds. C the Signs currently covers a population of 8,000,000 patients.

C the Signs is available on App, desktop and integrated with the patient's electronic health record. C the Signs is an evidence-based tool, that has had a significant impact on patient outcomes. Trials to date have demonstrated a 30 times improvement in cancer detection rates.

Helping accelerate early diagnosis and survival from cancer.

Keywords:

Early diagnosis, cancer, primary care, oncology, digital screening, clinical decision support

Cera Care

Company Profile:

Cera Care is a technology-enabled home care provider, which has innovated a series of digital, algorithmic and machine learning technologies to transform the UK's social care sector. The company's pioneering technology predicts deteriorations in the health of users before they occur, ensuring more effective treatments and reducing the likelihood of hospital visits. By leveraging this technology, Cera Care is alleviating pressure on the NHS and empowering the UK's increasing older population to live better, healthier lives in their own homes.

Having grown rapidly since its launch four years ago, Cera Care has a network of 5,000 plus care staff providing more than 25,000 home visits per day. It's UK network consists of 50+ offices, with plans to double its headcount to 10,000 staff by the end of 2021.

Cera Care has raised more than \$100 million in funding to date and is currently planning it's international expansion, which will see the company grow into a number of new geographies over the coming year.

Keywords:

Closed Loop Medicine

Company Profile:

Closed Loop Medicine is a healthcare company focused on giving every drug its digital companion. The company has developed a patent pending, regulatory compliant platform for the creation of combination co-packaged drug + device products, where the latter is a CE marked software as a medical device (SaMD). The company has pioneered this approach for use with known drugs that can be used in partnership with Pharma or for its own pipeline programmes. The company has two programmes in development in Hypertension and Insomnia with clinical studies running in the US and UK. The company is developing strategic commercial co-development and commercialisation partnerships with pharmaceutical companies and specialist generics.

Current Health

Company Profile:

Current Health helps healthcare providers to reduce risk, cost, and readmissions while improving outcomes by empowering healthcare teams to safely monitor, manage and engage patients at home.

Our platform is powered by continuous wearable vitals monitoring, delivering unparalleled insight into daily health and activity. We combine this with an ecosystem of device integrations (from continuous glucose to spirometry) and advanced analytics to identify at-risk patients earlier and then deliver intervention through virtual video visits and automated phone calls.

Current Health helps doctors treat patients proactively by monitoring the body and automatically identifying disease.

DrDoctor

Company Profile:

DrDoctor is a UK's leading patient engagement platform on a mission to transform healthcare to a digital first model.

This will reset the supply and demand balance, allowing everyone to access the very best care from the comfort of their own home.

DrDoctor provides hospital patients with all the information they need, with a complete digital experience through a secure patient portal. Providers can move care online and automate routine tasks such as appointment management, pre-clinic assessments and remote monitoring. The award-winning platform is proven to reduce workload and follow-up activity while improving clinic utilisation and patient outcomes, with >30 major NHS customers.

DrDoctor manages over 40 million hospital appointments and has to date helped more than 10 million patients move their care online.

Collaboration & Communication

eConsult

Company Profile:

eConsult Health Ltd is the NHS's leading digital triage platform with two main products.

eConsult is the most widely used digital triage tool in NHS primary care, built by NHS GPs for NHS patients, designed to enhance patient access, improve practice efficiencies and sign-post patients to the right place at the right time for their care. Live in over 2200 NHS practices, eConsult gives millions of patients access to their own GP online, allowing patients to submit their symptoms or requests to their own GP electronically, and offers around the clock NHS self-help information, signposting to services and symptom checking.

eTriage is an automated triage platform for urgent and emergency departments. Patients check-in and are automatically prioritised by clinical need within minutes of arrival. eTriage speeds up the streaming process, identifying sick patients earlier, reducing the waiting time and time to treatment within the department and delivering improved patient journeys. Live in 3 NHS emergency departments, over 160,000 digital triages, 99% patients triaged automatically within average of 5 minutes arrival.

Transforming the NHS from within, built by NHS doctors, eConsult Health Ltd helps improve patient access to healthcare and ensure they are directed to the right clinician for their symptoms as quickly as possible.

Keywords:

Digital triage, asynchronous consultation, online consultation, remote closure of clinical encounters, reduced face to face contact, data collection and analysis

Foundry4

Company Profile:

Foundry4 are pioneering healthcare transformation specialists using data, technology, and user-centred design to empower the sector.

As strategic partners to the NHS, we work closely with health and social care organisations to design, build, and support national digital health services that positively impact the lives of millions of people.

We focus on understanding the complex problems that healthcare systems face, their strategic goals, and the needs of the people they affect (citizens, patients, medical staff and more). We create national digital innovations from these, such as pandemic management systems, workforce support services, and performance data platforms that deliver positive outcomes, making a real difference across the entire healthcare sector.

Glamorous.AI

Company Profile:

Glamorous AI's vision is to put the most advanced technologies in the hands of humanity to cure the world's most debilitating diseases. Our proprietary platform, Rosalind, is the first AI platform to focus entirely on diseases where only little information is available, a challenge that is currently intractable by other approaches. Advanced methods from AI have led to the early validation of the extraordinary power of Rosalind. In weeks, Rosalind identified a hitherto undiscovered hit candidate for the notoriously challenging cancer target.

GlamAI has a special interest in oncology and neurodegeneration, with a number of programs currently under development internally and in collaborations with leading research organisations and biotech companies. Increase productivity and reduce the cost of drug discovery - addressing diseases of unmet need through novel human-artificial intelligence.

Huma

Company Profile:

Huma exists to help people live longer, fuller lives. We improve healthcare and research with a disease, cloud and device-agnostic digital health SaaS platform. We power digital clinical trials and run hospitals-at-home across the UK, Germany and the UAE. Evidence shows our Covid-19 service can double clinical capacity, reduce readmission rates by a third, and reduce costs.

We created an app that securely combines real-time data from patients, sensors, devices and digital biomarkers, with easy dashboards for doctors and researchers.

The app is used to generate predictive insights, detect health deterioration and enable remote monitoring for digital clinical trials, companion apps, peri-op support and hospital-at-home services.

IMMJ

Company Profile:

IMMJ Systems enables the rapid digitisation of paper based clinical content for use at the point of care. We do this through our MediViewer™ electronic document management solution which has been built specifically for healthcare providers and designed around the needs of healthcare professionals. IMMJ Systems provide an end to end solution that optimises every aspect of the digitisation of clinical content at a fraction of the cost of our competitors. By providing intuitive, simple, secure and extremely fast access to patient paper records through digitising the process, MediViewer™ delivers significant improvements in patient care quality alongside operational and cost efficiency benefits.

MediViewer™ is used by over 45,000 healthcare professionals supporting many millions of patients today. Our technology allows healthcare professionals to view digitised paper patient records in a simple but powerful 'viewer' from any device. We integrate with all Electronic Patient Record (EPR) solutions and enable clinicians to quickly search and surface required information at the point of care. During the Covid-19 pandemic, we have supported many UK Hospital groups to deliver virtual clinics through the provision of MediViewer™ as a platform to access medical records via the cloud.

Infinity Health

Company Profile:

Infinity is a digital platform on which health and care staff can log, share and coordinate their daily care tasks in real-time. It eases the burden on NHS staff by helping them to manage their workload more easily, collaborate with colleagues from across specialties, and give visibility of the information they need, when they need it.

Using Infinity solves many communications issues that arise with current paper-based processes, and that lead to more than one third of adverse events in healthcare. It saves hours of valuable clinical time, reduces the chance of things being missed, eliminates duplication, and supports improved patient flow.

The platform integrates with and sits alongside other patient record systems, supporting staff to seamlessly coordinate care and access patient information from the point of care. This is safer for them, safer for patients, and more efficient.

“It’s time to stop using paper lists and spreadsheets in healthcare.”

Intouch with Health

Company Profile:

Intouch with Health is the prime supplier of patient flow management solutions to the NHS acute sector, putting the right patient at the right place in the right time, whether for planned Outpatient Services, Elective Care and Day Cases or for unplanned 'Walk-in' Services.

The award-winning Intouch with Health Platform currently processes over 30 million outpatients appointments annually and supports over 110 hospitals, nationally and internationally, managing all aspects of a patient's hospital journey, from patient self-check-in to discharge and beyond for remote care.

Using the Intouch Platform, hospitals can manage fully integrated and intelligent blended flow in one dashboard for those patients presenting physically at the hospital as well as those presenting virtually. This approach enables hospital staff to manage all virtual/remote/long-term condition patients (via video or telephone) alongside patients physically attending hospital appointments, in the same way. The Intouch Platform also improves the patient experience by offering patients greater convenience and digital communication channels, whilst supporting social distancing and infection prevention measures.

Medics.Academy

Company Profile:

Medics.Academy uses technology to create innovative, high quality and scalable healthcare training programmes.

Our work includes:

- Creation of multimodal training programmes, alone or with partner organisations
- University accredited healthcare training programmes
- Curriculum development
- Creation of digital healthcare education content
- Development of learning social communities
- Technical management solutions in delivering learning events e.g. virtual conferences
- Technical and dashboarding solutions for managing training programmes.

Medics.Academy provides innovative technology enhanced learning solutions and communications strategies in the healthcare space.

Augmenting Healthcare Professionals

Medicspot

Company Profile:

Medicspot operates the largest network of UK clinics outside of the NHS. Each clinic has a telemedicine station powered by Arc Health. The station boasts a stethoscope, otoscope, blood pressure monitor, thermometer, and pulse oximeter. This gives doctors the ability to examine a patient during a live video consultation, offering the same experience as an in-person appointment.

Patients now have better access to exceptional care. They can choose from one of hundreds of clinics where a doctor can remotely listen to their heart and lungs, examine their ears, skin and throat, and record observations like blood pressure, temperature, oxygen saturation and pulse rate. Medicspot offers a near substitute for in-person appointments but with the cost savings and efficiency of digital care.

The Arc Health platform has been used by Medicspot and NHS doctors to treat more than 50,000 patients, with an average rating of 9.7/10. Medicspot plans to scale its network of clinics globally; all it needs is a strong internet connection and space for the telemedicine station.

Keywords:

Remote examination, remote consultation, remote monitoring, video consultation

MediShout

Company Profile:

MediShout transforms hospital buildings into digitally-smart environments, so staff can provide best patient care. The MediShout App is the world's first "one-stop shop" for healthcare staff to instantly resolve any operational task or issue e.g. report faulty IT or equipment, escalate low stock, complete HR risk-assessments. Data is sent to the relevant helpdesk, manager or supplier, whilst AI-algorithms predict problems in advance like medical equipment faults.

MediShout is being used by healthcare organisations such as Imperial College Healthcare Trust, and global equipment suppliers. It saves staff time and can save hospital groups £1million per annum. The company is on the national NHS Innovation Accelerator and has raised venture capital funding.

MedShr

Company Profile:

MedShr is a medical knowledge platform that connects over 1.5 million doctors in 190 countries, and is growing rapidly across all clinical specialties. Launched in 2015 to enable doctors to share and discuss clinical cases, MedShr is the only truly global online medical community, and works in partnership with over 200 national and specialist medical societies.

MedShr offers a highly targeted channel for pharmaceutical and device companies to educate and engage with doctors. Programs use clinical case discussion, supported with webinars, video content, publications and trial results for market shaping, drug launches and to increase market share.

Recently launched MedShr Learning provides a new online learning platform within the network, and MedShr Insights provide unrivalled data from real world medical practice.

Metix

Company Profile:

Metix assists in automating patient transport processes and generating insights that allow clinical teams to continuously improve. Metix's unique capability is to digitize high acuity monitoring and seamlessly combine clinical, operational and demographic data with a transport team's administrative processes.

Metix uses universal monitoring sensors and techniques to capture patient vitals' data. Metix then compiles and transmits the data for continuous real time viewing and in formats that satisfies administrative requirements helping to cut administrative time by up to 66%! This time saved allows the transport team to use the Metix system as a foundation for quality improvement, enabling the auditing of a patient transfer to analyze their treatment effectiveness and where further operational improvements can be made.

Furthermore through real time continuous remote monitoring a physician can be involved in the patients transport journey. Studies have shown that there is a 20% reduction in patient mortality when prehospital teams are physician-led. The Coremed provides a mechanism for physicians to be included at every stage of the transport allowing them to assist with treatments and interventions. Metix is confident this will lead to greater clinical outcomes as well as increase in patient satisfaction and reassurance. Metix is expected to launch in the USA this year and is seeking partnerships with Hospital systems to streamline their critical patient transfers.

Navenio

Company Profile:

Navenio's AI-led location-based Intelligent Workforce Solution helps transform and improve workforce efficiency in hospitals by understanding healthcare staff's movements and prioritising workload in real-time, based on the principle of 'right person, right time, right place'.

Underpinned by award-winning University of Oxford science and unlike other indoor location solutions, Navenio unlocks significant improvements in workflow without the need for surveying or investment in new infrastructure. Navenio delivers highly accurate and scalable indoor location and works where GPS does not work, enabled simply by using sensors in smartphones.

Navenio has had a dramatic effect on efficiency and productivity in UK hospitals, doubling the amount of work being completed by multiple teams, resulting in better care and improved patient outcomes.

Navenio's technology is available as a standalone solution or can be used to inform decision-making and facilitate location being integrated into a hospital's existing apps and platforms.

It's a bit like Uber...but for staff in healthcare" Dr Harpreet Sood, Former NHS England Deputy CCIO.

ORCHA

Company Profile:

In the face of a global pandemic, there has never been a more critical time for health professionals to be recommending effective, trustworthy apps to patients. ORCHA, the Organisation for the Review of Care and Health Apps, is unique in the world. It reviews and distributes health apps, testing each against 350+ tough digital health measures and arming health and care professionals with accurate prescription tools. Its mission is to ensure health services - both in the UK and globally - can deliver safe, effective health to their populations.

ORCHA works with eleven governments around the world. In the UK, it has been reviewing apps for the NHS since 2015 and 60% of NHS regions now have a dedicated ORCHA app library.

OxeHealth

Company Profile:

Oxehealth is a global leader in vision-based patient monitoring and management. We help clinicians to deliver safer, higher quality and more efficient care. Oxehealth's Oxevision is a contact-free vision-based patient monitoring platform. It gives clinical teams early warning signs and risk factors to help them plan patient care and intervene proactively. This results in fewer incidents and injuries, improved quality and operational savings.

It uses a secure contact-free optical sensor (camera + infrared illumination) to monitor a patient's pulse rate, breathing rate and activity/behaviour in a bedroom - serving up warnings, alerts, reports and observations to clinicians at the right time. Oxehealth are working with 1-in-3 NHS England mental health trusts.

Oxevision outcomes include:

- Saving 7800 hours of clinical time saved per 24 bed ward
- 22% reduction in self-harm incidents in bedrooms; 66% reduction in en-suite ligatures
- 48% reduction in falls in bedrooms; 68% reduction in A&E visits
- 26% reduction in assaults in bedrooms; 40% reduction in rapid tranquillisation

Spirit Health

Company Profile:

Spirit Health Group is a multi-award winning organisation, working with the NHS to deliver effective solutions in digital health, clinical service delivery and medicines optimisation.

By combining health and social care expertise with digital technical knowhow, the Spirit team are making healthcare safer, smarter, more efficient; fit for this digital age. We're taking healthcare to people in their homes and connecting them to clinicians like never before through digital pathways.

Our pathways are delivered on our proven digital health platform CliniTouch Vie. This combines remote monitoring, patient education and patient self-management to create a 24/7 accessible virtual clinic within a mobile device. By capturing vital signs and using structured question sets, our evidence based intelligent algorithms enable clinicians to monitor deterioration and intervene when necessary.

Our solution covers a range of care settings to provide chronic disease management, post-discharge from hospital, to digital health education and rehabilitation programmes such as pulmonary rehabilitation or structured diabetes education.

Talking Medicines

Company Profile:

The pharmaceutical sector spends \$30Bn on marketing each year in the US alone without really knowing if that investment is doing any good.

Specialists in social intelligence for the pharmaceutical industry, Talking Medicines has developed PatientMetRx to provide a systematic way of measuring patients' experience of taking medicines in the real world, at home.

Powered by EVA, a proprietary AI machine developed by the company, PatientMetRx combines Machine Learning and Natural Language Processing to capture the voice of the patient from billions of conversations taking place over multiple sources including social media, forums and blogs, mapped to a curated database of 130,000 regulated global medicines. It distils and translates what patients are saying online and more importantly, what they are feeling, into powerful data insights which are pharma compliant.

Ultramed

Company Profile:

MyPreOp is an online patient driven preoperative assessment programme. Patients are given access to www.myultramed.com with a hospital and product specific code after a 'decision to treat' i.e. they need an operation. They create an account, fill in the FHIR based questionnaire and then submit their data to their healthcare provider. This is reviewed by a registered nurse in the Clinician Portal and the patient moved through the various steps in a preoperative assessment including the recommended tests and actions made by MyPreOp. Once the preoperative assessment process is complete, a pdf is generated which is then integrated in the patient's electronic record. MyPreOp® is supported by the NHS Innovation Accelerator for widespread adoption in the NHS. It is used in hospitals across the UK including Guys and St Thomas's hospitals.

X-Lab offers a globally-unique service, called Labgnostic, which connects any diagnostic health system to any other system, anywhere in the world.

Since 2006, X-Lab has delivered an interoperable and agnostic connectivity solution to diagnostic laboratories called Labgnostic. Labgnostic is a proven product which provides access to a global network of diagnostic organisations through a single connection. Labgnostic has transformed diagnostic healthcare in the UK by prioritising efficiency, patient-safety, cost-reduction, data quality, network-access and provision at scale. X-Lab is offering its unique and crucial product to the worldwide diagnostics community.

X-Lab holds 95% UK market share with Labgnostic (marketed under NPEx in the UK), it is used by 100% of the NHS, and was mandated by the government for all components of the UK's COVID-19 testing response. Almost 200 UK NHS, Public Health England and private laboratory organisations are using the service across the UK and Europe.

Yoti

Company Profile:

Yoti is a digital identity platform and free app that helps individuals and organisations manage personal details and credentials including biometrics, staff IDs and health test results - this facilitates secure identity authentication and access control online and in person using an individual's phone instead of a traditional ID card or paper certificates.

With Yoti, organisations can bind an individual's health test result to the verified identity on their phone - it's more secure, easier to share and protects their privacy.

Helping staff and citizens prove who they are, their qualifications & health test results and be allowed in the right places online and in person.

Keywords:

Health credential management, digital identity, IAM, access control, digital ID, health passports

Current operating countries:

UK, Australia, New Zealand, India, USA, Canada, Europe
