

A collaborative platform of industries with a shared ambition : *Make waste recycling & recovery a real opportunity for economic and industrial territorial development*

Focus on Plastics recycling

September 26 2017

Brussels

2ACR: Co-construction with all players in the value chain, business organizations, ERP schemes and public authorities

Steering of multi-partners studies

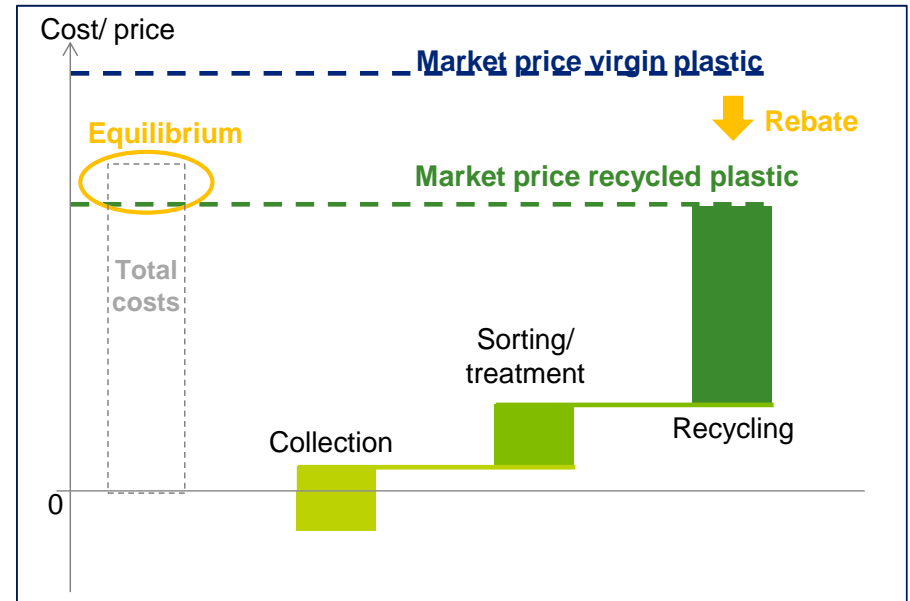

2014: “Analysis of the plastics recycling value chain in France” (14 partners)

2016: “Feasibility of Medium-Term Economic Mechanisms to Secure the Plastics Recycling Value Chain” (16 partners)

Key findings :

1) "societal" feasibility of a "voluntary" scenario, aimed at reaching a "material" recycling of 300,000 additional tonnes (input to recyclers) of plastic waste per year within 5 years (€150 M cost over 5 years, 2,000 jobs creation)

2) a lack of profitability

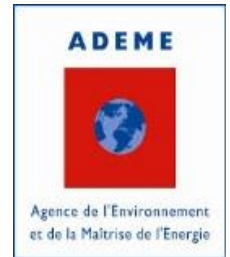

Key priorities for developing the plastics recycling chain

Improve access to resources for recycling

Increase integration of recycled plastics in new products

Orplast- ADEME Financial Support Scheme
Pull mechanism for all companies (in France),
users of plastics (e.g. converters, brand owners...)

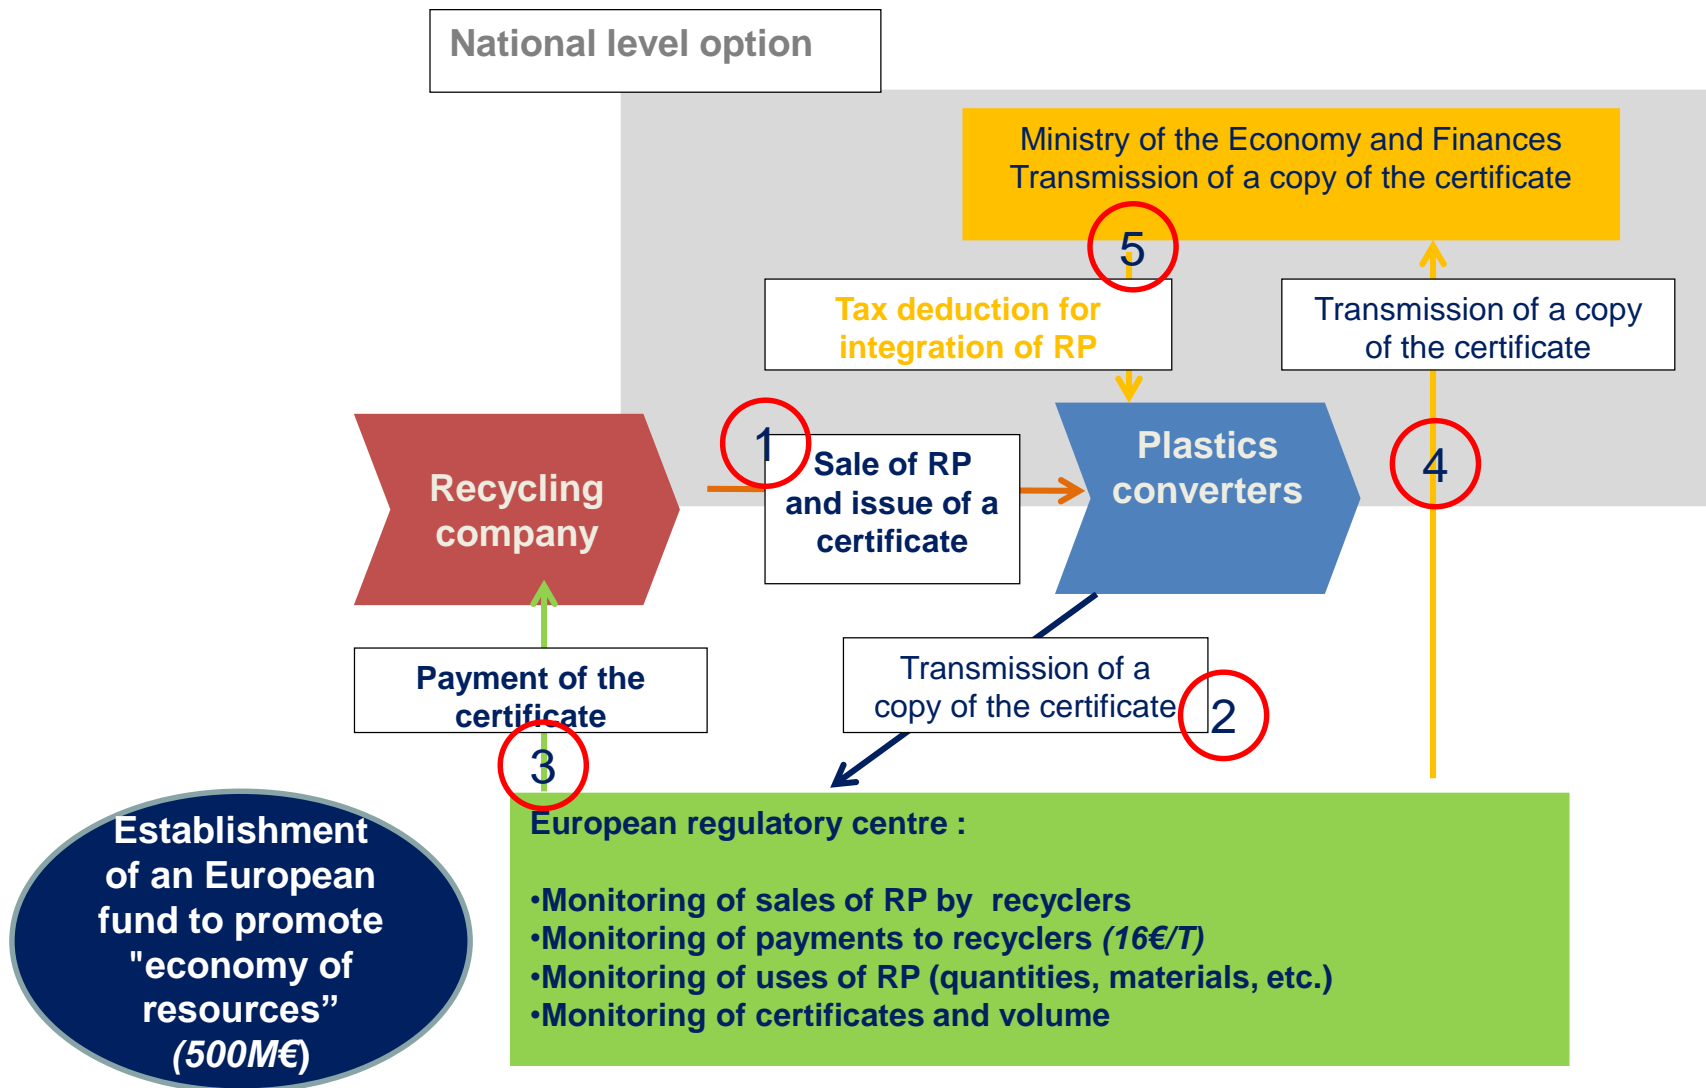

Establish multi-annual economic, financial and tax mechanisms to ensure a broad "seeding" of the industry

2ACR proposal: a single mechanism to promote the production and use of Recycled Plastics in Europe in order to develop the economy of resources

2ACR proposed mechanism

2ACR complementary networking actions

➔ Animation of the plastic recycling value chain
 ➔ Dedicated Social Network www.2acr.eu
 ➔ www.frplast.org

➔ Organisation of workshops, working groups, conferences...

➔ Promotion of Recycled plastics LCI studies

Thank you for your attention
