

Publications

Class II HLA interactions modulate genetic risk for multiple sclerosis. (2015) *Nat Genet* 47, 1107-13. PMID: 26343388.

Confounding underlies the apparent month of birth effect in multiple sclerosis. (2013) *Ann Neurol* 73, 714-20. PMID: 23744589.

Analysis of immune-related loci identifies 48 new susceptibility variants for multiple sclerosis. (2013) *Nat Genet* 45, 1353-60. PMID: 24076602.

Genetic risk and a primary role for cell-mediated immune mechanisms in multiple sclerosis. (2011) *Nature* 476, 214-9. PMID: 21833088.

Evidence for polygenic susceptibility to multiple sclerosis--the shape of things to come. (2010) *Am J Hum Genet* 86, 621-5. PMID: 20362272.

Risk alleles for multiple sclerosis identified by a genomewide study. (2007) *N Engl J Med* 357, 851-62. PMID: 17660530.

Association scan of 14,500 nonsynonymous SNPs in four diseases identifies autoimmunity variants. (2007) *Nat Genet* 39, 1329-37. PMID: 17952073.

A high-density screen for linkage in multiple sclerosis. (2005) *Am J Hum Genet* 77, 454-67. PMID: 16080120.

A genome screen in multiple sclerosis reveals susceptibility loci on chromosome 6p21 and 17q22. (1996) *Nat Genet* 13, 464-8. PMID: 8696343.
